Letter from the Management Board

Dear Shareholders,
Dear Sir or Madam,

the Nynomic Group started the 2026 financial year as planned, with a significantly improved operating performance. We were able to noticeably increase our growth momentum in the first half of the year while at the same time expanding our operating result. This confirms the positive impetus from our relevant sales markets as well as the effect of the efficiency measures we have consistently implemented.

We regard the noticeably increased order backlog as a particularly positive signal. It underscores the strengthening demand base and the increasing momentum in key target markets. The order backlog therefore provides a solid basis for the further course of business and the continuation of our growth trajectory.

The improvement in profitability reflects the significantly reduced fixed cost base and the emerging scaling effects, which will have a disproportionately positive impact as quarterly sales continue to rise and the product mix improves accordingly.

so, we address markets with strong and sustainable fundamental growth drivers. Demand for spectroscopic innovations and highly precise, non-destructive measurement methods is rising – as are the requirements of our customers for faster, more efficient, more digital and more resource-efficient processes.

With our broad and differentiated solutions portfolio, we are very well positioned to support our customers worldwide in meeting these challenges. Nynomic's technologies make a substantial contribution to more precise, more efficient and digitally integrated processes, increasingly through the use of AI-based applications. Attractive additional market opportunities are currently arising, particularly in the semiconductor sector.

The development in the first half of 2026 confirms the operating recovery of the Nynomic Group, even in a macroeconomic environment that remains challenging. The high order backlog provides good visibility for the rest of the year and forms a well-founded basis for continuing our growth trajectory.

The high order backlog provides good visibility for the rest of the year and forms a well-founded basis for continuing our growth trajectory.

These advances are reflected in the key figures for the first half of 2026. Group sales in the first six months rose to around EUR 47.7 million, up from EUR 42.1 million in the prior-year period. The result also shows a turnaround: EBIT improved to around EUR 1.8 million, compared with EUR -2.0 million in the first half of 2025. The order situation also developed very favourably. The high-quality order backlog increased by around 46% as at 30 June 2026, to around EUR 63.5 million.

Our half-year results underscore the effectiveness of our strategy and form a good basis for the further profitable growth of the Nynomic Group. In doing

For the second half of the year, we expect a further improvement in operating performance. In addition to the realisation of sales from the existing order backlog, the effects of our NyFIT2025 efficiency programme will take hold to a greater extent. Combined with the reduced cost base, rising sales volumes should have a clearly positive effect on profitability. This gives us the best possible conditions for further increasing sales and profitability in the coming quarters. Even in a volatile market environment, we remain committed to our strategy and see Nynomic AG in a strong position to continue profitably along its chosen course and to tap into additional market potential.

Against this background, we are confirming the guidance issued at the start of the year and expect Group sales for the full year in a range of EUR 100.0 million to EUR 105.0 million, together with an EBIT margin of between 6% and 8%.

We thank you for your trust and support and look forward to shaping the further development of the Nynomic Group together with you.

Yours sincerely,

Fabian Peters Maik Müller

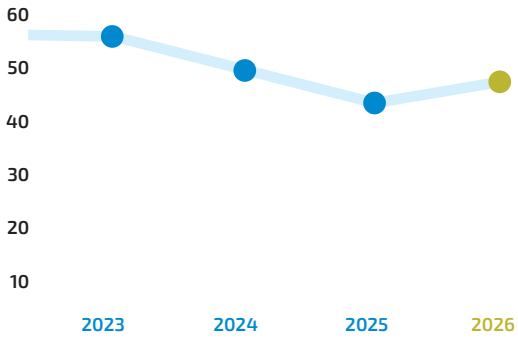

Key figures

Comparison of H1 2023 to H1 2026

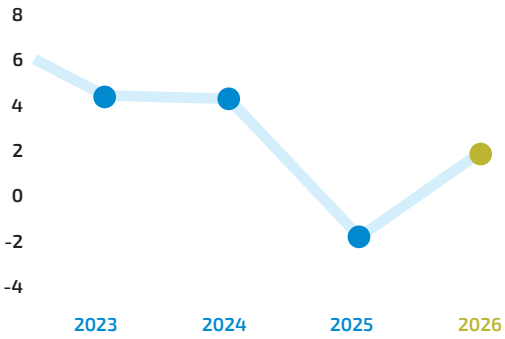

Sales revenue in million EUR

Sales revenue developed very positively in the first half of 2026.

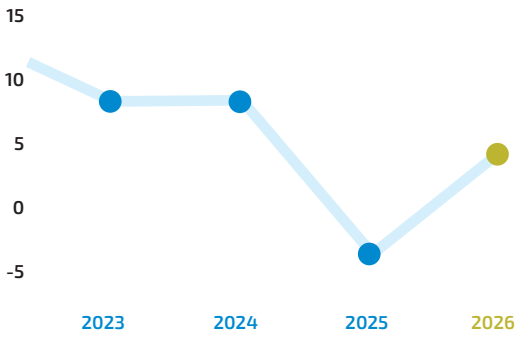

EBIT in million EUR

The successfully implemented NyFIT2025 efficiency programme contributed to a noticeable improvement in EBIT.

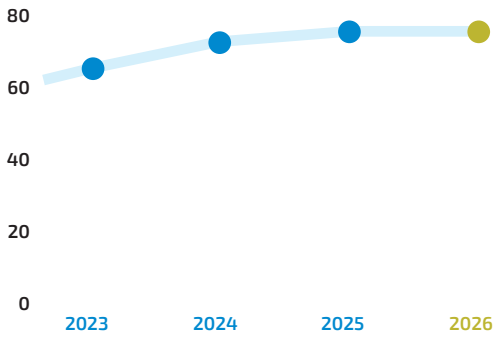

EBIT margin in %

The EBIT margin has recovered noticeably and shows a clear upward trend.

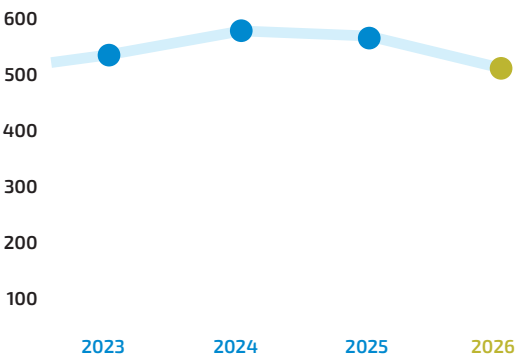

Equity ratio in %

The strong equity base confirms the sustainable financial stability of the Nynomic Group.

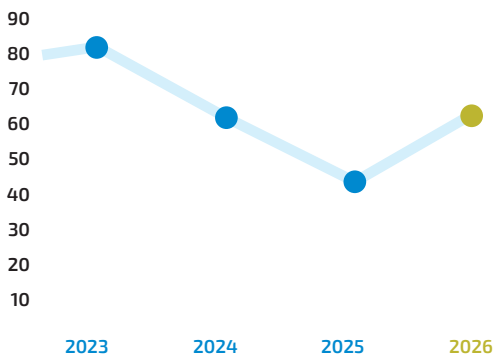

Average number of employees

The number of employees reflects the optimised and efficiently structured organisation.

Order backlog in million EUR

The very dynamic development of the order backlog increases visibility for the coming quarters.

A future built on substance – efficiency, innovation and uncompromising quality

Our principles are based on technological expertise and entrepreneurial responsibility and are aimed at delivering measurable progress and long-term value creation.

Technology leadership through customer-focused innovation

Nynomic is an internationally active technology group focused on the development and manufacture of highly precise solutions and products for permanent, non-contact and non-destructive optical measurement technology. We offer a broad range of services for a multitude of different application areas by implementing innovative photonic measurement technology. We guarantee the highest quality and safety standards, as well as the flexibility to quickly and precisely meet individual requirements.

The advanced production technologies of the Nynomic Group reduce unit costs, promote miniaturisation and enable innovative applications to replace conventional solutions, opening up new market opportunities. This enables our customers to increase their profitability and secure sustainable competitive advantages in a

dynamic environment. Our customer base is diverse, ranging from medium-sized manufacturers to globally operating corporations. Long-standing and successful partnerships with key customers are of great importance to us. Mutual trust and a deep understanding of our partners' needs form the foundation of these relationships. This enables us to anticipate future trends at an early stage and develop products tailored to those trends. With a focus on profitability, cost awareness and efficiency, we transform potential into tailor-made solutions and set new industry standards as a trusted partner.

We remain firmly focused on sustainable growth and profitability, driven by innovation, operational excellence and a strong customer focus. Through the targeted development of profitable markets and the continuous optimisation of our value chain, we aim to create measurable added value for all stakeholders. Our entrepreneurial activities combine economic success with social and environmental responsibility to create long-term value.

Forward-looking business areas and markets

The operating activities of the Nynomic Group are focused on three forward-looking, high-growth segments whose strategic orientation is aligned with the requirements of their respective target markets and applications. Structural megatrends such as demographic change, digitalisation, artificial intelligence, resource scarcity and the global focus on sustainability are creating attractive market opportunities for us. Increasing regulatory requirements are strengthening market momentum and generating additional growth impetus.

Green Tech segment: Innovations for sustainable agriculture

Nynomic develops highly precise, customised high-tech solutions for agriculture and environmental technology. The growing demand for sustainability, environmental protection and efficient resource utilisation requires intelligent solutions for smart farming – a market that is experiencing rapid growth as part of the Agriculture 4.0 trend. Thanks to state-of-the-art sensor technology, Nynomic's solutions support, among other things, precise soil and plant analysis, real-time quality control of harvests and optimised remote-controlled livestock feeding. In addition, our spectrometric sensors can determine fertiliser requirements directly on agricultural machinery, enabling automated, demand-driven fertiliser application that optimises resource utilisation and reduces groundwater contamination. Our portfolio also includes next-generation NIR-based sensors that provide quantitative constituent analysis of maize and slurry as a dual-use solution and have been developed as plug-and-play systems in close collaboration with partners.

The portfolio is further enhanced by a wide range of new and innovative data-processing functionalities, including AI-based models embedded directly in the device (AI on Device). These enable even more precise analysis and intelligent real-time process control, both in agriculture and in related fields such as environmental and agricultural engineering. As a result, our customers benefit not only from greater efficiency but also from improved compliance with regulatory quality standards. In this way, Nynomic combines innovative technologies with sustainable agriculture – helping to create a profitable and future-proof agricultural sector.

Clean Tech segment: Efficient high-tech solutions for industry

In this segment, Nynomic offers a broad portfolio of forward-looking technologies for the industrial sector as a whole. From highly precise optical sensors to customised turnkey systems, Nynomic's solutions optimise processes, increase efficiency and set new standards in industrial quality assurance. In the semiconductor industry, optical measurement systems improve efficiency and precision in the production of micro-LEDs and lasers, among other applications. At the same time, spectroscopic solutions ensure consistently high quality by precisely monitoring coating processes in lithography and in the production of wafers and displays. In-line metrology solutions also support precise process monitoring during key semiconductor process steps such as etching, deposition,

coating and stripping. In the photovoltaic industry, our in-process measurement solutions provide precise optical quality control in modern thin-film production lines, including the manufacture of perovskite solar glass. Nynomic's intelligent machine vision and ADAS technologies are also setting new standards in the automotive sector: highly precise testing and calibration solutions enhance camera, LiDAR and RADAR systems – a crucial step towards autonomous driving.

From the chemicals and food industries to semiconductor manufacturing, automated inspection systems such as our new plug-and-play spectroscopy platform ensure more precise quality control and higher production standards. In addition, the gas sensor portfolio has been expanded to support new applications in industrial monitoring and agriculture, offering even lower detection limits. The portfolio is complemented by integrated data processing and AI-based models embedded directly in the device, which are already being deployed successfully in the process industry. In this way, Nynomic is setting new standards for automated quality control and sustainable production processes.

Life Science segment: Forward-looking technologies for medicine and research

In this segment, Nynomic offers highly precise technologies for the pharmaceutical, medical technology and biotechnology industries. By leveraging state-of-the-art sensor technologies, the Group enhances efficiency and precision in research, diagnostics and pharmaceutical manufacturing.

These innovative solutions enable optimised workflows, more precise analyses, higher reproducibility of results and seamless quality control. For example, Nynomic improves efficiency and flexibility in laboratory blood diagnostics through automated systems and sample preparation solutions. In addition, automated sample-handling and spectroscopy-based online measurement systems support high-throughput diagnostic processes, including sample qualification as well as pre- and post-analytical procedures through to molecular diagnostics and PCR.

With its mobile analytical devices, Nynomic replaces costly laboratory testing with immediate results. NIRONE-based real-time analysis systems are deployed directly in highly compact tablet presses, monitoring every individual tablet at full production speed for uniformity, active ingredient content and potential counterfeit products, thereby supporting flexible small-batch production and rapid product changeovers. PURPL Pro, a portable cannabis testing system, measures moisture content and active ingredient concentration with laboratory-grade precision and supports producers operating in regulated markets. TactiScan, the first reusable drug-screening device, identifies illicit substances directly through packaging without the need for chemical reagents or complex sample preparation.

Thanks to exclusive patent and licensing rights in analytical technology, Nynomic continues to unlock new opportunities for the medicine of the future. Through innovative technologies and strong partnerships, the company is setting new standards in the life science industry – delivering greater efficiency, safety and quality in medicine and research.

Buy & build – dynamic growth through strategic acquisitions

With ten subsidiaries worldwide, Nynomic, as a leading provider of innovative non-contact optical measurement technology, secures direct market access, strengthens its proximity to customers and optimises its sales and logistics structures. The Group covers the entire photonics value chain, offering variable levels of vertical integration and customised product adaptations, from high-quality components through to complete instruments. This is complemented by software solutions and additional services, including application-specific support for the implementation of our solutions. Nynomic is making targeted investments in the expansion of a Group-wide cloud platform and the systematic deployment of artificial intelligence and neural networks. This includes, in particular, the use of LLMs and the development of powerful AI agents.

Strategic management by Nynomic AG as a financial holding company promotes vertical integration and maximises synergies for sustainable success. The close integration of the subsidiaries accelerates access to future-oriented technologies while at the same time increasing innovative strength and process efficiency. In addition to production facilities, which are primarily located in Europe, the Group's international subsidiaries and sales locations provide local and direct customer support.

The targeted diversification of our product portfolio and our ongoing global expansion enable us to minimise market risks, leverage synergies and achieve sustainable profitable growth. High quality and reliability are core values of the Group – from development and production through delivery to services surrounding a product.

Tailor-made solutions from a single source:
The high-quality optical measurement cells and spectrometers developed by Avantes form the foundation of the portfolio. tec5 builds on this core technology by combining components into powerful system solutions and generating greater added value. m-u-t leverages synergies within the Group to develop innovative applications and bring them to market as series-produced products. The technology portfolio has been strategically expanded to include solutions for the wood-processing industry, environmental and agricultural technology, as well as miniaturised MEMS-based spectral sensors. The investment in LayTec marked another important milestone in strengthening the Nynomic Group's portfolio as a comprehensive solutions provider. LayTec develops and manufactures measurement systems for the semiconductor and photovoltaic industries, as well as for the analysis of large-area surface coatings. LemnaTec expands the portfolio with highly sophisticated sensor and automation technologies for digital plant phenotyping in research and industry. The acquisition of Sensortherm further strengthened the Group's expertise in non-contact temperature measurement. Sensortherm specialises in digital pyrometer technology and enables highly accurate, rapid measurements for demanding applications. Another strategically important step was the investment in Image Engineering, a technology leader in the field of image quality measurement. The continuous advancement of testing and calibration equipment for cameras and multi-sensor systems is setting new industry standards and strengthening the innovative capabilities of the Group as a whole. The acquisition of MGG, a globally recognised specialist in miniature and precision light sources, strengthens the Nynomic Group's technology portfolio across the value chain and also contributes to the positive development of the Group as a whole through the consolidation of market expertise and product know-how, as well as the efficient use of resources. The success story of selective acquisitions continued with the investment in NLIR and the full acquisition of art photonics. These investments have secured a leading position for the Nynomic Group in the promising field of mid-infrared (MIR) technology. NLIR's patented upconversion technology enables the scalable use of MIR measurement systems in industrial processes for the first time. As a leading provider of speciality fibres for optical measurement technology, art photonics is setting new standards in this segment.

With its clear, forward-looking growth strategy, Nynomic focuses on systematic acquisitions, strong brands and the continuous development of its technology portfolio. Through the intelligent utilisation of synergies and a focus on customer-centric solutions, we safeguard our technology leadership and unlock new growth opportunities.

The share

In the first half of 2026, following two years of stagnation, the Scale stock exchange segment saw a revival; the Nynomic share is listed in the Scale 30, the selection index of the most actively traded stocks in this segment.

Having started the stock market year at 1,061.11 points on 2 January 2026, the Scale 30 closed on 30 June at 1,233.88 points, a gain of around 16%.

The performance of the Nynomic share was far better still, rising from EUR 9.88 to EUR 17.10 over the same period, a gain of around 73%.

On 23 March, the Company reported on the course of the fourth quarter of 2025 and presented its guidance for the 2026 financial year. The figures for the first quarter of 2026 were announced on 8 May. Both incoming orders and earnings developed very positively for two consecutive quarters; in May, the Company was also able to announce the acquisition of the remaining 49% of Image Engineering GmbH & Co. KG. In addition to the earnings call on the 2025 financial results held via the Airtime IR platform in March, the Management Board discussed current newsflow with the financial community at the Equity Forum spring conference in Frankfurt on 12 May and at the mwb Online Industry Conference on 22 June.

Following the positive development in the first half of the year, the analyst firms Montega AG and NuWays AG raised their price targets for the Nynomic share to EUR 30.00 and EUR 28.00 respectively.

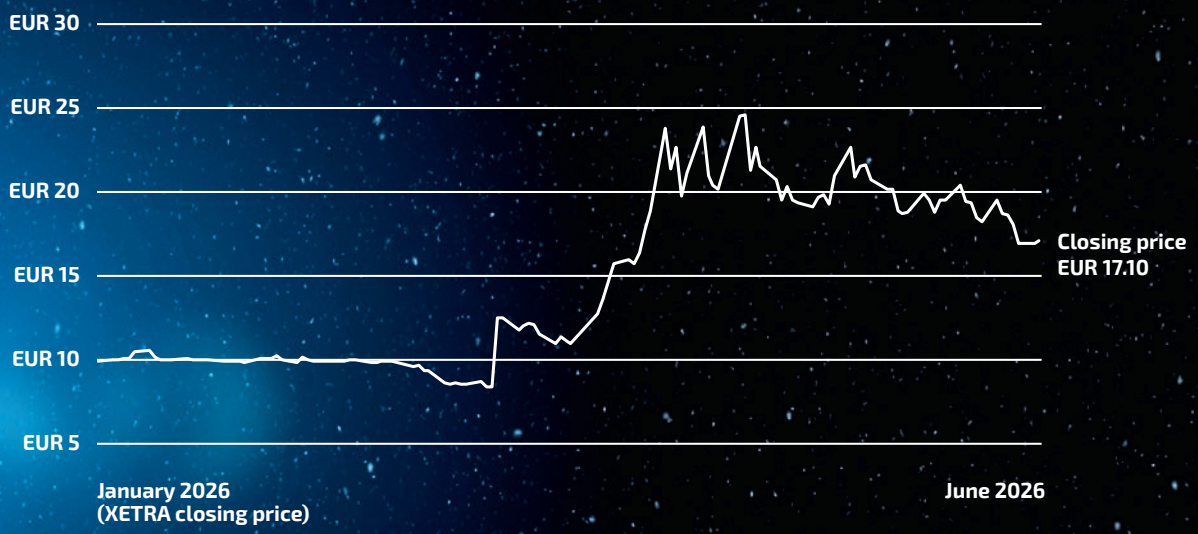

The positive operating development of Nynomic AG and the performance of its share price also attracted attention in the financial press: Focus Money, Der Aktionär, Börse Online and other publications reported on the Company; further information can be found on the recently and comprehensively revised Investor Relations website, www.nynomic.com.

Photonic innovations for a sustainable future

With photonics as a core competency and a key enabling technology for sustainability, the Nynomic Group makes a valuable contribution to protecting the environment and conserving resources across a wide range of fields. Our three segments – Life Science, Clean Tech and Green Tech – offer significant potential to advance environmental sustainability through photonic high-tech solutions.

Anyone seeking to innovate must be open to new ideas. For Nynomic, this means working in a forward-looking and solution-oriented manner and, at times, embracing unconventional challenges. We consistently harness the dynamism of the photonics industry to help shape new developments, identify changing requirements and continuously adapt and optimise our innovative solutions and product portfolio. Photonic technologies are often superior to alternative methods in terms of sustainability and enable us to make our customers' production processes more environmentally sustainable. The highly efficient and effective applications and processes enabled by photonics demonstrate that economic success and environmental protection are not opposing objectives but can, in fact, reinforce one another. At Nynomic, sustainable business practices and profitable growth are inseparable. We are proud that our innovative, resource-efficient solutions create added value for our customers, our partners, the environment and society. Technological progress and responsible corporate governance go hand in hand at Nynomic. Our corporate culture, built on mutual trust, is dependable and forms the foundation for positive social interaction throughout the Group. With our committed and highly skilled Nynomic team, we safeguard our competitiveness and innovative strength while laying the foundations for long-term growth. We firmly believe that our forward-looking approach to employee development—including support, training, flexible working arrangements and a healthy work-life balance—is a key factor in our success.

It is important to us to provide our stakeholders with a comprehensive understanding of our commitment to a sustainable business model. To this end, we place great emphasis on openness, transparency and adherence to high standards in order to maintain the trust of our stakeholders.

In its latest assessment, the independent ESG rating agency imug rated our sustainability performance as “very good”. This assessment confirms our ongoing commitment to sustainable business practices.

Our objective is to continue to maintain a leading position in the field of sustainability. We firmly believe that our commitment to sustainability not only has a positive impact on the environment and society, but also strengthens the long-term success and resilience of our Group.

Notes to the Consolidated Financial Statements for the half year ended 30 June 2026

General information for the consolidated interim financial statements

The accompanying unaudited interim consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS), in full compliance with the IFRS applicable in the European Union and the supplementary commercial and company law provisions to be applied in accordance with § 315e of the German Commercial Code (HGB).

The consolidation, accounting and measurement methods, to the extent that they are consistent with IFRS, were applied unchanged from the previous HGB-based accounting for the preparation of these interim financial statements.

The regulations of IAS 34 (Interim Financial Reporting) have been observed.

Nynomic AG has its registered office in Wedel and is entered in the Commercial Register at Pinneberg District Court under No. HRB 6913 PI.

The consolidated profit and loss account was prepared using the nature of the expense method.

The financial year for the Group and the consolidated companies corresponds to the calendar year.

The shares are admitted to the open market (Freiverkehr), which is not an organised market according to section 2(11) of the German Securities Trading Act (WpHG). The shares are traded in the "Scale" SME segment of Deutsche Börse AG in Frankfurt.

The accounting policies described below were applied in preparing the consolidated interim financial statements.

New accounting standards

Amendments to existing accounting standards, or new accounting standards, published by the IASB up to 30 June 2026 and to be applied on a mandatory basis in the future are of minor significance for the Company.

Scope of consolidation

Subsidiaries included

Nynomic AG is the direct or indirect parent company of the following subsidiaries within the meaning of IFRS 10, which are included in the interim consolidated statements according to the principles of full consolidation:

	Equity interest (%)
m-u-t GmbH, Wedel	100.00
with its affiliated companies and their equity interests:	
APOS IP GmbH, Wedel	100.00
Spectral Engines Oy, Helsinki (Finland)	100.00
Purpl Scientific Inc., Plainview (New York, USA)	100.00
tec5 AG, Steinbach	100.00
with its affiliated companies and their equity interests:	
tec5 USA Inc., Plainview (New York, USA)	51.00
tec5 China Ltd., Beijing (China)	80.00
Avantes Holding B.V., Apeldoorn (Netherlands)	100.00
with its affiliated companies and their equity interests:	
Avantes B.V., Apeldoorn (Netherlands)	100.00
Avantes USA Inc., Lafayette (Colorado, USA)	100.00
Avantes China Ltd., Beijing (China)	60.00
Avantes Shanghai Ltd., Shanghai (China)	60.00
Avantes Hong Kong Ltd., Hong Kong (China)	60.00
LayTec AG, Berlin	100.00
with its affiliated company and equity interest:	
LayTec UK Ltd., Ince (Greater Manchester, United Kingdom)	100.00
LemnaTec GmbH, Aachen	100.00
Sensortherm GmbH, Steinbach	100.00
MGG Micro-Glühlampen-Gesellschaft Menzel GmbH, Wentorf	100.00

Image Engineering GmbH & Co. KG, Kerpen *	100.00
with its affiliated companies and their equity interests:	
Shenzhen Image Engineering Optoelectronic Equipment Co. Ltd., Shenzhen (China)	100.00
Image Engineering USA Inc., South Lake Tahoe (California, USA)	100.00
Image Engineering Komplementär GmbH, Kerpen	100.00
Photecture Inc., Plainview (New York, USA)	100.00
art photonics GmbH, Berlin	100.00

*= 100% interest following the acquisition of the 49% non-controlling interest on 21 May 2026

NLIR ApS (Farum, Denmark) is an associate with an equity interest of 31.25%. The interest in NLIR ApS is included in the consolidated financial statements using the equity method.

Disclosures regarding accounting policies

The assets included in the interim consolidated financial statements are measured on a uniform basis in accordance with IFRS 10.

Goodwill
Goodwill under IFRS 3 represents the amount by which the total purchase price for a company or business exceeds the fair value of the newly acquired and remeasured assets and liabilities. Goodwill is not amortised on a scheduled basis but is tested for impairment at least annually in accordance with the requirements of IAS 36.

Internally generated intangible assets are capitalised in accordance with IAS 38 at production cost. This mainly relates to control software. Intangible assets with a finite useful life are amortised on a straight-line basis over their economic useful life.

Intangible assets acquired for consideration are recognised at cost and, where they have a finite useful life, are reduced by scheduled amortisation over their useful life (1 to 10 years, straight-line method).

Tangible fixed assets are recognised at acquisition or production cost and, where depreciable, are reduced by scheduled depreciation. Property, plant and equipment is depreciated over its expected useful life. Depreciation is calculated on a straight-line basis.

Lease accounting under IFRS 16
Right-of-use assets are recognised at cost. On initial measurement, these comprise the corresponding lease liability, lease payments made at or before the commencement date of the lease, initial direct costs and any costs incurred upon termination of the lease (restoration or dismantling costs).

Inventories are recognised at acquisition or production cost or at the lower net realisable value. If the net realisable value is below the book value, it is written down to that lower amount.

Work in progress and finished goods or services are measured at production cost in accordance with IAS 2, including the necessary overheads.

Receivables and other assets are recognised at nominal value. Specific risks are recognised through impairment allowances. Default and credit risks are adequately taken into account through value adjustments.

Cash comprises cash on hand and bank balances immediately available at credit institutions with an original maturity of up to three months. These are recognised at nominal value.

Provisions take account of all identifiable risks and uncertain obligations. They are set at the necessary settlement amount according to reasonable commercial assessment, taking into account price increases. For interest-free provisions with a term of more than one year, discounting is carried out using an average market interest rate before tax.

Liabilities are recognised at their settlement amount.

The translation of the financial statements of subsidiaries denominated in foreign currency was carried out in accordance with IAS 21 using the modified closing rate method, i.e. the balance sheets were translated at the closing rate (exception: equity at historical rates) and the income statements at the average rate for the year; resulting differences were recognised in a currency translation reserve within equity and in other comprehensive income.

Notes to the balance sheet

Deferred tax assets and liabilities

The calculation of deferred taxes is based on temporary differences arising from the difference to the tax base. The deferred taxes relate, among other things, to temporary differences at the level of the individual financial statements of the companies included; deferred taxes arising from the elimination of intercompany profits were measured at an unchanged average tax rate of 30% at the expected time of reversal. Minor deferred tax liabilities were offset against deferred tax assets at the level of the individual financial statements of a subsidiary.

Subscribed capital

As at the reporting date, the share capital is divided into 6,568,820 no-par-value bearer shares, each representing a notional interest in the share capital of EUR 1.00. All shares are ordinary shares, each carrying one voting right.

Other liabilities

Other liabilities mainly relate to short-term personnel obligations and tax payments.

Explanations on the profit and loss account

Breakdown of revenues

Sales revenue is broken down as follows:

by operating segment

	in TEUR
Clean Tech	31,165
Life Science	6,230
Green Tech	10,354
Total	**47,749**

by sales regions

	in TEUR
Germany, Europe and other countries	28,506
Americas	8,360
Asia	10,883
Total	**47,749**

Income taxes

Income tax expense is mainly attributable to current Group earnings.

Other information

Contingent liabilities

There were no contingent liabilities as at the reporting date.

Other financial obligations

There are no significant other financial obligations outside the matters recognised under IFRS 16.

Disclosures on financial instruments

The Company uses derivative financial instruments only to a limited extent.

Number of employees

The average number of employees during the first half of 2026 was:

Salaried employees	397
Industrial employees	93
Students/interns/trainees	4
Total	**494**

Subsequent Events Report

No events of particular significance occurred after the end of the first half of 2026.

Management Board

The Management Board comprises the following members:

- Mr Fabian Peters, Hamburg
- Mr Maik Müller, Kronberg in the Taunus

The members of the Management Board are authorised to represent the Company jointly with another member of the Management Board. Use is made of the exemption under § 314 (3) HGB in conjunction with § 286 (4) HGB.

Supervisory Board

The Supervisory Board comprises the following members:

- Mr Hans Wörmcke (Chairman), Heist, Businessman
- Dr Sven Claussen, Lawyer (Deputy Chairman), Hamburg, Partner at Weiland Rechtsanwälte Partnerschaftsgesellschaft mbB
- Mr Hartmut Harbeck, Wedel, Businessman

Responsibility statement of the legal representatives

These interim consolidated financial statements as at 30 June 2026 and the consolidated interim management report were prepared on 21 August 2026 by the Management Board of Nynomic AG, which is responsible for the completeness and accuracy of the information contained therein. The interim consolidated financial statements were prepared in accordance with IFRS, particularly the regulations for compiling interim statements following IAS 34. It is in line with Directive 83/349/EEC. The prior-year figures were determined on the basis of the same principles. The consolidated interim statements were supplemented with a consolidated interim management report and other notes required under § 315e of the German Commercial Code (HGB).

Consolidated Interim Group Management Report for the half year ended 30 June 2026

The statements made in the 2025 Annual Report regarding the Group's business model, strategy and objectives, as well as its research and development activities, remain valid as at the date of preparation of this interim report.

Contents

A. Business performance, including the net assets, financial position and results of operations
B. Opportunities and risk report
C. Sustainability objectives
D. Forecast report
E. Other information

A. Business performance, including the assets, financial position and results of operations

Revenue development

Overall, the business performance of Nynomic AG improved significantly in the first half of 2026 compared with the prior-year period. The increase in sales and the noticeably higher order backlog underscore this positive upward trend. Group-wide sales in the first half of 2026 thus amounted to around EUR 47.7 million (prior year: EUR 42.1 million; +13%). Sales growth was driven in particular by the pick-up in demand in our core markets and reflects the increasing momentum in the industry environment. Additional structural momentum is coming from advancing digitalisation and the increasing use of artificial intelligence, which is accompanied by rising demand for high-performance semiconductors and corresponding production capacity.

The high-quality order backlog as at 30 June 2026 stood at around EUR 63.5 million, significantly above the prior-year level (EUR 43.4 million; +46%).

Earnings performance

The increase in operating profitability in the first half of 2026 confirms the positive business momentum of Nynomic AG. EBIT increased to around EUR 1.8 million, significantly above the prior-year level (prior year: EUR -2.0 million; +190%). In addition to higher customer sales, the improvement in earnings is attributable, among other things, to the effects of the NyFIT2025 efficiency programme implemented during 2025. As part of the optimisation measures, the Group structure was adjusted and the cost base sustainably reduced.

The resulting efficiency gains are already clearly reflected in earnings performance in the first half of the year and, combined with the higher sales level, are generating noticeable economies of scale. In addition, a gradual improvement in the product mix is contributing to the positive development of the operating margin.

The Group's gross margin was slightly lower than in the prior year. Compared with the prior year, the cost level in personnel expenses was reduced by around EUR 2.0 million, while other operating expenses increased slightly.

Investments

In the past first half of the year, replacement investments in operating and office equipment amounting to around EUR 0.4 million were made; additions under IFRS 16 amounted to around EUR 1.7 million.

Financing

Bank financing for the share acquisitions and the utilisation of current account liabilities amounted to around EUR 2.9 million as at the reporting date. Repayments in the first half of 2026 amounted to around EUR 1.2 million, relating to the repayment of financing loans and current account liabilities.

Net cash position vis-à-vis banks (liquid funds less liabilities to banks) decreased, for reporting-date

reasons, to around EUR 9.4 million as at 30 June 2026 (as at 31 December 2025: net cash position vis-à-vis banks of EUR 11.3 million). The solid level of liquid funds underscores the Group's stable financing strength.

Liabilities from lease financing, amounting to around EUR 14.7 million, relate to the present value of rental payments for leased premises and office equipment, which are recognised as liabilities under the application of IFRS 16 (leases). A corresponding amount was capitalised under fixed assets as a right-of-use asset from leasing and is depreciated over the term of the underlying lease agreements. The underlying lease payments also reduce the liabilities from lease financing.

In addition to its own strong financing capacity, the Company continues to have sufficient financing potential, through the utilisation of bank-provided credit lines and capital measures, to finance its medium-term growth strategy.

The Management Board considers the ongoing monitoring of liquidity to be one of its Group-wide core tasks. Appropriate control instruments are established accordingly. The Management Board expects the financial position to remain solid in the future.

Assets

The Company's total assets as at 30 June 2026 amounted to around EUR 133.5 million, virtually unchanged compared with 31 December 2025. The asset structure is characterised by the proportion of non-current assets in total assets of around 53% (as at 31 December 2025: 54%). The proportion of inventories and trade receivables amounts to around 34% (as at 31 December 2025: 32%), while cash accounts for around 9% (as at 31 December 2025: 11%) of total assets.

The equity ratio, at around 76% (as at 31 December 2025: 75%), documents the Group's solid financing structure.

Working capital, at around EUR 32.8 million, was above the reporting-date figure as at 31 December 2025 (EUR 28.6 million). The increase is mainly attributable to seasonal fluctuations in demand during the year.

The cash position decreased to around EUR 12.3 million, mainly due to the repayment of financial liabilities and an increase in short-term working capital positions.

Other provisions decreased by around EUR 0.4 million in the first half of the year.

Workforce

The average number of around 494 employees in the first half of 2026 decreased by around 11% compared with around 553 employees in 2025. The reduction is mainly explained by the targeted personnel measures implemented as part of the NyFIT2025 cost optimisation programme.

Order backlog

As at 1 July 2026, a net order backlog of around EUR 63.5 million (as at 31 December 2025: EUR 45.0 million) was carried forward. The continued high-quality order backlog relates to all segments and underscores the Group's strategically robust positioning. In the gas measurement technology segment in particular, incoming orders are increasingly benefiting from rising global energy demand, the expansion of new infrastructure such as AI data centres, and the general transformation of energy supply.

B. Opportunities and risk report

The Group's risk management aims to identify potential risks at an early stage in order to avert potential damage to the Company through appropriate measures and rule out any threat to its continued existence.

The risk management aims and methods are lean, as befits the company's size, the flat hierarchical structure, the number of employees and the field of activity.

The Nynomic Group has extensive planning and control tools. These support the Management Board in identifying business risks at an early stage and taking effective countermeasures.

A risk management system is used to monitor and control the main risks. As a result, risks are analysed at defined intervals and material changes in the risk profile are reported to the Management Board. Risk management also monitors and manages risks relating to sustainability.

Overall, the Management Board assumes that the risks are manageable for the company. Dealing with these risks is strategically seen as an opportunity that needs to be seized.

C. Sustainability objectives

Sustainable business practices are an important part of the Nynomic Group's strategy and are given the highest priority. Nynomic harnesses the high innovative power of photonics to develop high-quality solutions and products with positive sustainability impacts, enabling customers to achieve more energy-efficient, resource-saving and environmentally friendly processes.

Environmental, social and employee matters, respect for human rights, and the fight against corruption are consistently taken into account in Group-wide decisions and everyday conduct. The Nynomic Group implements a range of environmental management and operational environmental protection measures and, as a globally active group, is committed to respecting human rights, internationally recognised labour standards and local laws, as well as explicitly to equal opportunities and diversity. For Nynomic, good corporate governance means not only complying with legal and regulatory requirements but also meeting further material, self-imposed ethical and moral standards across the Group.

In its most recent ESG sustainability rating in 2023, the Nynomic Group achieved a “very good” result. The Management Board views this as confirmation of its wide-ranging sustainability efforts and uses the rating results as a guide to continuously identify further potential for improvement and initiate additional activities.

To better measure the progress of its sustainability efforts, the Group has defined a number of material ESG KPIs based on a materiality analysis and underpinned them with quantifiable targets. To further professionalise its sustainability communications, Nynomic AG, going beyond regulatory requirements, reported voluntarily and proactively for the first time in the 2022 financial year on three selected non-financial key indicators, the achievement of which is continuously monitored and published in Nynomic AG's Annual Reports.

D. Forecast report

The risk and opportunity report has not changed materially compared with the presentation in the 2025 Annual Report. Risks that could threaten Nynomic's going concern are still not apparent.

Group-wide, Nynomic focuses on the Life Science, Clean Tech and Green Tech segments. Building on Nynomic's core technology in process-integrated continuous online measurement, new market potential is continually opening up in addition to existing applications. The Management Board sees no signs of saturation in the market segments in which the Group operates. The Management Board continues to see promising technology partnerships and development projects with potential for future growth in all three segments.

The Management Board expects key growth drivers to continue to include digitalisation and the increasing use of artificial intelligence. The Nynomic Group also expects stricter regulatory requirements, particularly in the areas of product safety, quality verification and environmental standards, to have a positive impact on demand for precise and reliable measurement and sensor technology.

In the Management Board's assessment, global trends such as demographic change, increasingly scarce resources and the growing need for efficient and sustainable processes also support the medium- and long-term growth prospects of the relevant markets. Photonics, as a key technology, makes an important contribution in this respect.

Capital investment

No material direct investments in intangible and tangible fixed assets are planned or necessary.

As part of its medium-term corporate strategy, the Management Board plans to continue expanding the Nynomic Group's technology portfolio through targeted, forward-looking acquisitions and to strengthen its market position.

Competitors

The market for photonics applications, which is relevant for Nynomic, is characterised worldwide by a high number of suppliers competing with each other. Alongside a number of large, globally active players, there are numerous smaller companies that operate regionally or have specialised in particular target groups and technologies.

Nynomic is driving forward a Group-wide sales strategy and, in this context, a general increase in sales activities.

Company forecast

Thanks to its strong market position in its key segments and its clear focus on customer-oriented photonic innovations, the Nynomic Group is well positioned to benefit disproportionately from any market recovery and to sustainably continue the successful business development seen in the years before the economic crisis. The robust asset position, the flexible financing structure, management's high degree of adaptability, and a broadly diversified product mix together with global market presence also form a solid basis.

The results for the first half of 2026 show clear effects of the NyFIT2025 efficiency programme implemented during 2025, which will continue to contribute to further improvements in efficiency, profitability and competitiveness going forward. A stabilising economy and increasing willingness to invest in our core markets should provide additional support to earnings for the remainder of the year.

Overall, the Management Board expects a continuous improvement in operating performance and, despite macroeconomic conditions that remain difficult to forecast, takes a cautious but continued optimistic view of future business development.

In a market environment that remains strongly shaped by economic uncertainty and geopolitical tensions, the Management Board members of the Nynomic Group, Maik Müller and Fabian Peters, currently expect Group sales for the 2026 financial year in a range of EUR 100.0 million to EUR 105.0 million, together with an EBIT margin of between 6% and 8%.

The Management Board continues to plan, over the medium term, to achieve average annual sales growth of around 10% and a stable EBIT margin of more than 15%.

E. Other information

Research and development

Research activities are generally carried out in cooperation with external partners. Beyond that, specific product development is carried out in-house and

recognised as an expense. In the first half of 2026, research and development expenditure within the segments of the Nynomic Group amounted to around EUR 5.3 million. This underlines the focus towards becoming a leading supplier of series-produced products and solutions in a technologically demanding market.
