NYNOMIC
THE PHOTONICS GROUP

Nynomic AG Annual Report

2025

Nynomic
The Photonics Group

Nynomic AG is a leading international manufacturer of products for continuous, non-contact and non-destructive optical measurement technology. Our products and services are based on a broad range of intelligent sensor technologies for measuring optical radiation, combined with smart technologies for data acquisition, processing and analysis. They can be scaled to a wide range of applications and, thanks to their excellent adaptability to customers' processes, deliver sustainable efficiency gains and significant customer value. As an innovative technology leader in photonics, we strive to provide our partners and customers worldwide with first-class, end-to-end solutions as a one-stop shop—from the development of customized measurement solutions and production through to system integration.

For Nynomic, partnership means mutual trust, professionalism and continuity. Our aim is to meet and support our customers' expectations at all times through the development of safe, innovative and market-leading products.

Our success is built on the talents and capabilities of our employees, whose passion and achievements drive the successful and sustainable development of our company for the benefit of all stakeholders. Technological excellence, team spirit and personal responsibility are core values embodied by our strong team.

Strategic Future Fields – Shaping the Future Together

Future technologies are of key strategic importance to Nynomic. Miniaturisation, digitalisation, automation and artificial intelligence – Nynomic is consistently embracing ongoing technological change.

Our future-oriented fields transcend individual disciplines, promise significant technological progress and contribute to quality of life and the conservation of resources. We take bold steps beyond the familiar: Visions are transformed into successful business models that are tailored to customer needs, commercially viable and sustainability-focused. Thanks to our broad spectrum of technological capabilities, we are able to chart a viable path towards this vision of the future while balancing tomorrow's opportunities with today's realities. We accomplish this by implementing innovative photonic measuring technology to measure parameters, which are of vital importance in the areas of Life Science, Green Tech and Clean Tech.

Letter from the Management Board

Dear Shareholders,
dear Sir or Madam,

Nynomic looks back on a challenging 2025 financial year, characterised by geopolitical uncertainty, ongoing trade tensions and an overall weak economic environment. The subdued momentum of the global economy had a noticeable impact on our business performance and resulted in restrained investment activity among customers in our target markets. The anticipated market recovery failed to materialise, particularly during the first half of the year. Following many years of profitable growth, this represented a significant challenge for our Group for the second consecutive year, which we addressed through targeted measures.

Against this backdrop, we closed the 2025 financial year in line with our most recently revised forecast, generating revenue of approximately EUR 92.6 million and EBIT of approximately EUR 2.0 million. Earnings performance was primarily impacted by temporary charges related to restructuring measures and lower economies of scale. A particularly positive development was the gradual operational improvement in the second half of the year, which also reflected the initial benefits of the efficiency measures introduced.

With the NyFIT2025 efficiency programme launched at the end of 2024, we laid the foundation early on for a sustainably improved cost and margin structure. As part of the programme, key process optimisation measures were implemented and the merger of Spectral Engines GmbH and APOS GmbH into m-u-t GmbH was successfully completed in 2025. As a result, we increased our operational efficiency and scalability, enhanced flexibility and optimised our cost structures.

The measures introduced will make us stronger, more resilient and more competitive in the future. The resilience of our business model and the strength of our team reinforce our commitment to consistently pursue the course we have set. Our special thanks go to all employees who, through their dedication and flexibility in a challenging environment, made a significant contribution to the stabilisation and continued development of the Nynomic Group.

At the same time, we operate in markets with clear long-term growth prospects. The photonics industry is a key sector for numerous future-oriented fields and, as an enabler of technological innovation, makes a significant contribution to addressing global challenges, ranging from climate protection and resource efficiency to the automation and digitalisation of industrial processes. As a provider of highly advanced optical measurement and sensor technologies, Nynomic plays an active role in this field.

AI-powered applications, in particular, offer considerable growth potential. The combination of optical measurement and sensor technology with artificial intelligence enables precise real-time data analysis and provides the foundation for adaptive, self-optimising processes in industrial manufacturing, life science applications such as diagnostics and analytics, and green tech solutions for emissions monitoring and resource efficiency. Our systems continuously generate highly precise measurement data throughout the entire process chain, which can be efficiently analysed using AI and translated directly into process control actions. This enables quality deviations to be identified at an early stage, reduces waste and allows processes to be optimised in real time. Through the seamless integration of scalable sensor concepts, we support the digitalisation and modularisation of modern production environments. These capabilities are complemented by cloud-based solutions for flexible data processing, ranging from web-based platforms to on-premises applications. This gives rise to tangible growth opportunities for the Nynomic Group, particularly in the further development of software-based analytics solutions and the expansion of existing portfolios.

The integrated use of hardware, data and AI not only enhances the performance of our solutions but also increases their scalability and differentiation in the

marketplace. The growing integration of AI into photonic systems is therefore becoming a key driver of innovation and opening up additional growth opportunities across our value chain. In this dynamic environment, our technological expertise and established position in measurement technology leave us well placed to benefit disproportionately from the long-term growth trends in photonics.

normalising inventory levels among our customers and positive market signals, we expect a return to profitable growth.

Overall, we believe we are well positioned to consistently capitalise on the opportunities arising in our markets. Based on the indicators currently available, we expect Group revenue in the 2026 financial year to be between EUR 100.0 million and EUR 105.0 million, with an EBIT margin of between 6% and 8%.

Through NyFIT2025, we have established key prerequisites that will enable us to respond to a persistently volatile market environment with leaner structures, greater operational efficiency and enhanced flexibility.

We are entering the new financial year with a strengthened structural foundation and a solid order backlog. Through NyFIT2025, we have established key prerequisites that will enable us to respond to a persistently volatile market environment with leaner structures, greater operational efficiency and enhanced flexibility. At the same time, we continue to benefit from a robust capital structure and a strong liquidity position. However, the macroeconomic and geopolitical environment remains characterised by uncertainty. We remain convinced of Nynomic's medium- to long-term market potential and strategic positioning. Against the backdrop of improving order intake,

Our special thanks go to you, our shareholders, for your trust and continued support. We greatly appreciate your support during this challenging period and look forward to shaping the future together with you.

Yours sincerely,

Fabian Peters

Maik Müller

Proven Management: The Management Board of Nynomic AG

Maik Müller has been a member of the Management Board of Nynomic AG since 2015 and is responsible for Technology, Operations and Research & Development.

Fabian Peters has been a member of the Management Board of Nynomic AG since 2015 and is responsible for Finance, Controlling, Organisation and Investor Relations.

Interview with the Management Board

For Nynomic, the 2025 financial year was characterised by challenging market conditions and consistent adaptation. In this interview, the members of the Management Board of Nynomic AG, Maik Müller and Fabian Peters, explain the measures that have been implemented and the opportunities arising from them.

Nynomic continued to operate in a challenging market environment during the 2025 financial year. How did this specifically affect demand?

Fabian Peters: 2025 was a year in which visibility in our target markets became the exception rather than the rule – in Germany, across Europe and around the world. Geopolitical tensions, trade conflicts, new tariffs and fragile supply chains significantly reduced planning certainty. This was directly reflected in customer behaviour: Investments were postponed, decisions were made at shorter notice and inventory levels were reduced more slowly, all of which had a corresponding impact on demand.

Were there differences in the development of the individual segments?

Maik Müller: Yes. In the semiconductor industry, for example, delayed inventory reduction, subdued end-market demand and postponed capital expenditure projects weighed on order volumes for an extended period. In agriculture, lower commodity prices, high financing costs and highly conservative liquidity management had a dampening effect. The Life Science segment also continued to face a challenging environment, characterised by restrained investment activity, longer decision-making cycles, as well as higher costs and regulatory hurdles.

Overall, the market remains in a transitional phase and has yet to return to a stable normal environment. What is important, however, is that many projects have not been cancelled but merely postponed, thereby providing a solid foundation for a gradual recovery in demand.

At what point did it become clear that corrective action was necessary? What were your key levers during this period?

Maik Müller: Over the course of the year, it became increasingly clear that the market environment was recovering more slowly than expected and that an adjustment of our cost base was required. Against this backdrop, one thing became clear: Waiting was not an option. The key was to take the right decisions at the right time and respond decisively. Our focus was on efficiency, cost savings and leaner structures in order to sustainably improve productivity. These were not easy decisions, but they were necessary to remain competitive over the long term.

What did the restructuring and efficiency programme specifically involve? When do you expect to see a noticeable impact on earnings?

Fabian Peters: The NyFIT2025 efficiency programme included personnel-related measures, the streamlining of the Group structure and further targeted cost optimisation measures. Key measures included the mergers of Spectral Engines GmbH and APOS GmbH into m-u-t GmbH. This enables us to consolidate expertise, reduce interfaces and realise additional synergies, particularly in administration and processes. At the same time, we are creating a significantly leaner and more efficient structure that strengthens our operational effectiveness.

The 2025 financial year was still heavily influenced by the implementation of these measures and the associated restructuring costs. From 2026 onwards, the measures will deliver their full impact and will have a clearly positive effect on our cost base. However, we are already seeing the first signs of success, particularly in the fourth quarter of 2025. With a very strong

double-digit margin, we achieved clear progress during the quarter, while also demonstrating the margin potential that exists at higher revenue levels. Above all, one thing is becoming increasingly clear: Our measures are taking effect. The improved cost structure is having an increasingly positive impact on earnings and demonstrates that we are moving in the right direction operationally.

The 2025 financial year was also challenging for your employees. How were the necessary changes received?

Maik Müller: Change is never easy. It is precisely in challenging times that the true strength of a team becomes apparent, and that is exactly what we witnessed throughout 2025. What impressed me most was how well collaboration worked both within our subsidiaries and across the Group as a whole – across functions, pragmatic and strongly solution-oriented. It was this commitment that made the necessary strategic decisions possible in the first place.

At the same time, we saw a high degree of willingness to embrace change and take responsibility throughout the Nynomic Group. Many employees played an active role in shaping the transformation and contributed valuable ideas and momentum. This shared understanding was a key factor in the successful implementation of the measures and demonstrates that our corporate culture remains strong even during challenging periods.

Fabian Peters: I am equally proud of our team. The commitment, flexibility and professionalism demonstrated in this environment were truly remarkable and represented a key success factor. During this period, it was important to us as the Management Board to provide clarity, even when not all the answers were immediately available. Transparency, clear communication and reliability were crucial.

You expect a return to growth in 2026. Looking ahead to the coming years, what gives you particular confidence?

Maik Müller: Our leading technological expertise and the high relevance of our photonic solutions in the markets in which we operate. One of our core strengths is our ability to translate our technologies into scalable, customer-focused solutions. Demand for precise, data-driven analysis is growing significantly across many of our target markets, whether in industry, agriculture or emerging fields of application. The Nynomic Group is well positioned to actively shape and further drive this development.

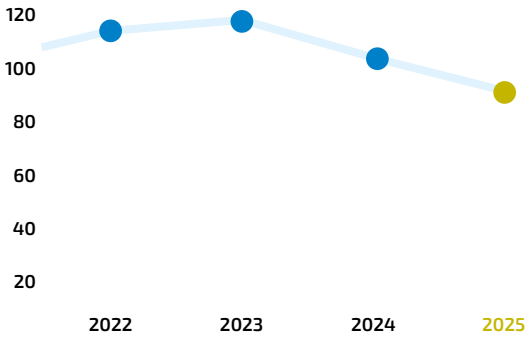

We used 2025 to significantly strengthen our organisational structure and further sharpen our operational focus. In addition, we are seeing that many of the projects that were postponed last year remain firmly in place and are gradually gaining momentum once again. Positive signals from our key customers confirm this trend.

Fabian Peters: For me, it is above all the combination of a strong team, a clear strategic direction and a significantly improved cost base. Following this transitional year, I believe we are well positioned to return to growth mode in 2026, with improved profitability and an overall stronger foundation. At the same time, we have a solid balance sheet that provides us with additional flexibility. One of the key lessons I take away from 2025 is that consistent action pays off, even when it may be uncomfortable in the short term. Particularly in a volatile environment, adaptability is a critical success factor.

Key figures in comparison from 2022 to 2025

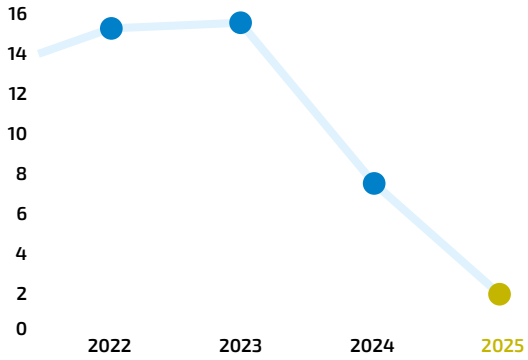

Revenue in EUR million

The decline in revenue was primarily attributable to the weak economic environment and the resulting reluctance to invest.

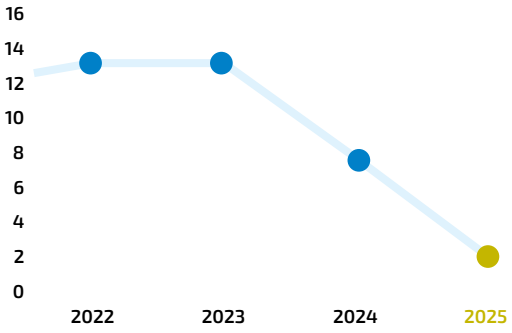

EBIT in EUR million.

The decline in EBIT was mainly due to the lower revenue level and temporary charges arising from restructuring measures.

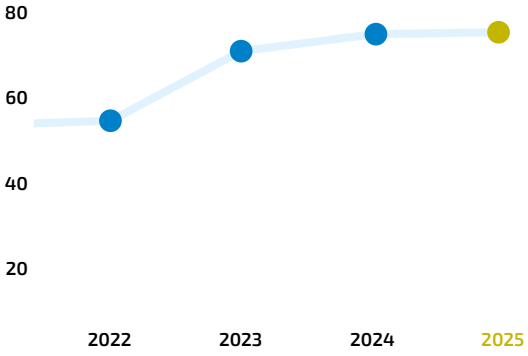

EBIT Margin in %

The EBIT margin recovered noticeably from the second half of the year onwards but remained below the prior-year level for the year as a whole.

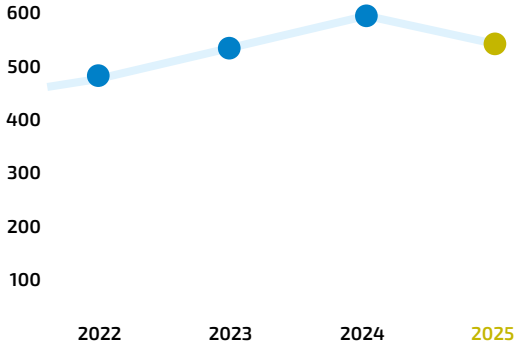

Equity Ratio in %

The continued very high equity ratio confirms the stable and resilient capital structure of the Nynomic Group.

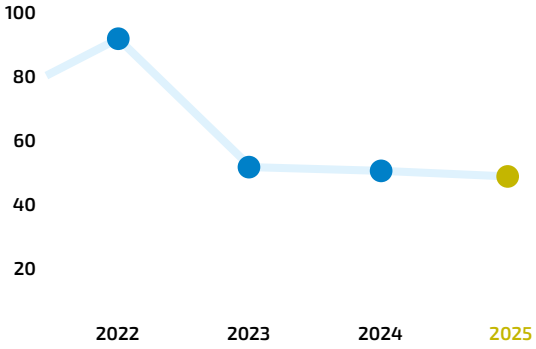

Average Number of Employees

The number of employees was reduced as planned as part of the NyFIT2025 efficiency programme.

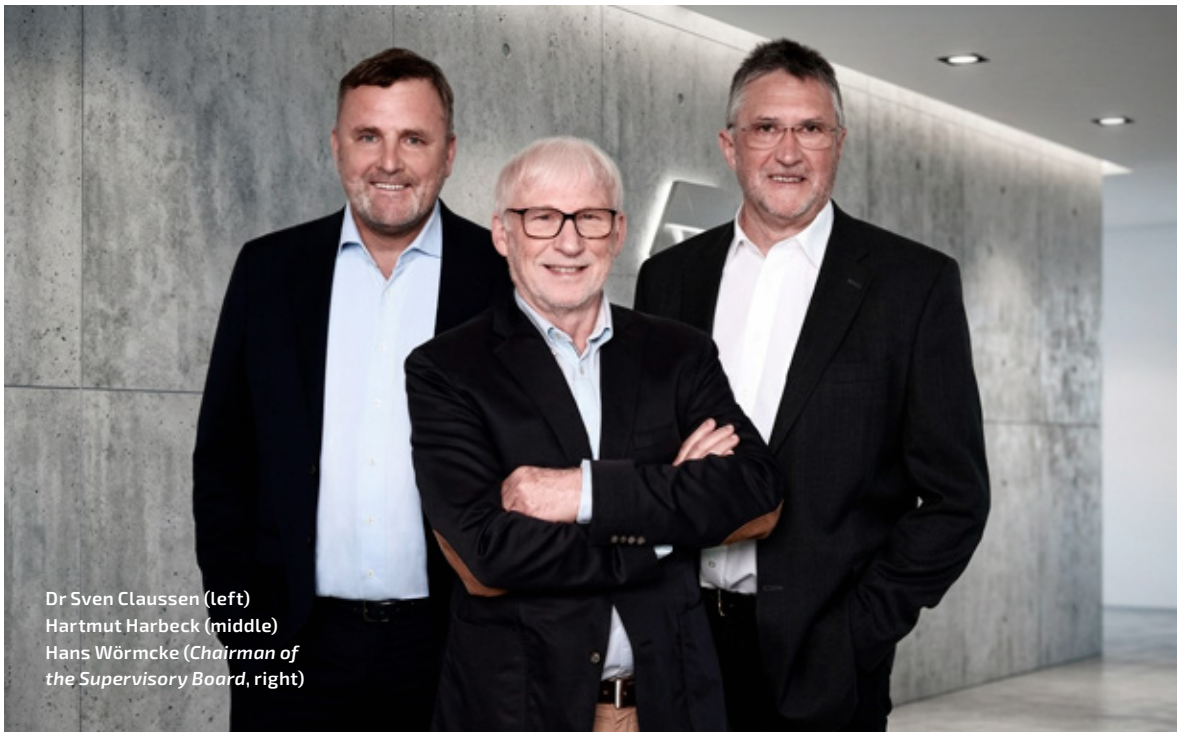

Order Backlog in EUR million

The order backlog at the end of 2025 provides good visibility for the coming financial year.

Report of the Supervisory Board

Dr Sven Claussen (left)
Hartmut Harbeck (middle)
Hans Wörmcke (*Chairman of the Supervisory Board*, right)

Dear Shareholders,

the 2025 financial year continued to be characterised by challenging economic and geopolitical conditions. The overall slowdown in market momentum across several core markets weighed on the Company's results.

As a result of the restructuring and efficiency measures implemented during the reporting year, the targeted further development of the technology portfolio and the Nynomic Group's continuing strong market position, conditions for positive business development are expected to improve from 2026 onwards.

During the 2025 financial year, the Management Board and Supervisory Board continued to work together in a spirit of trust and constructive cooperation. The focus of their joint activities was responsible, qualified and transparent corporate management, as well as the sustainable enhancement of the Nynomic Group's long-term value.

During the completed 2025 financial year, the Supervisory Board duly performed the duties incumbent upon it under the law and the Company's Articles of Association and continuously advised and monitored the Management Board in its management of the Company.

Monitoring and advising the Management Board in the conduct of the Company's affairs

The Management Board duly fulfilled its reporting obligations at all times and regularly, promptly and comprehensively informed the Supervisory Board, both in writing and orally, about all matters relevant to the Company and the Group relating to strategy, planning, business development, the risk situation, risk trends and compliance.

In addition, the Management Board provided the Supervisory Board with detailed information on all significant decisions, particularly with regard to the

Company's future earnings and growth strategy, including the underlying considerations and rationale. Furthermore, the Management Board informed the Supervisory Board about developments within the Group and its individual companies through regular reports, provided an outlook for the current financial year and enabled comparisons with previous reporting periods.

Against the backdrop of the political and economic conditions prevailing during the 2025 financial year, discussions focused on the implications for the Nynomic Group as well as the measures introduced under the NyFIT2025 efficiency programme and their strategic implications. As a result, the Supervisory Board was continuously provided with up-to-date information and data.

In addition to economic developments, environmental, social and governance (ESG) matters relating to the Nynomic Group's sustainability strategy were also on the agenda.

Transactions requiring approval were submitted by the Board of Directors in a timely manner for resolution. The Supervisory Board communicated its decisions on such matters without delay, taking into account the requirements of applicable law and the Company's Articles of Association.

The Supervisory Board granted all required approvals in a timely manner, in some cases by way of written circulation resolutions, which are permissible under the law and the Articles of Association of Nynomic AG.

Furthermore, the Supervisory Board was continuously and appropriately informed about risk exposures within the Group. Operational and strategic adjustments were presented and discussed in detail between the Management Board and the Supervisory Board. Cybersecurity strategies were also considered in this context.

During the 2025 financial year, the Supervisory Board met on two occasions, namely on 6 May 2025 and 9 December 2025. The Supervisory Board thereby complied with the requirements of stock corporation law regarding the frequency of Supervisory Board meetings, as it had unanimously resolved on 28 July 2016 to hold at least one meeting per calendar half-year. No committees were established during the 2025 financial year.

Review and approval of the annual and consolidated financial statements, including the management report and Group management report, as well as the audit conducted by the statutory auditor and Group auditor

The Supervisory Board received and reviewed, in a timely manner prior to its balance-sheet meeting on 7 May 2026, the annual financial statements and management report of Nynomic AG for the 2025 financial year, the Management Board's proposal regarding the appropriation of retained earnings, the consolidated financial statements prepared by the Management Board in accordance with Section 315e (3) of the German Commercial Code (HGB) and International Financial Reporting Standards (IFRS), the Group management report of the Nynomic Group for the 2025 financial year, and the audit reports of the statutory auditor and Group auditor.

The statutory auditor and Group auditor elected by the Annual General Meeting for the 2025 financial year, Clauß Paal & Partner mbB Wirtschaftsprüfungsgesellschaft Steuerberatungsgesellschaft, Münster, audited the annual financial statements together with the management report, as well as the consolidated financial statements together with the Group management report, and confirmed that the applicable accounting requirements and principles had been complied with in full. In each case, an unqualified audit opinion was issued.

At the balance-sheet meeting of the Supervisory Board held on 7 May 2026, all of the aforementioned documents were discussed in detail together with Mr Stefan Evers, auditor and tax adviser of Clauß Paal

& Partner mbB Wirtschaftsprüfungsgesellschaft Steuerberatungsgesellschaft, Münster, in his capacity as statutory auditor and Group auditor, and in the presence of the Management Board. During the meeting, Mr Evers reported on the course and results of his audit and was available to answer questions and provide additional information. Mr Evers' observations were discussed in detail with the Management Board and the Supervisory Board. The Management Board and the statutory auditor and Group auditor answered all questions raised by the Supervisory Board in full. In addition, the auditor confirmed that there were no material weaknesses in the internal control and risk management system relating to the financial reporting process.

The Supervisory Board's own detailed review of the annual financial statements and management report for the 2025 financial year, which had been audited by Clauß Paal & Partner mbB Wirtschaftsprüfungsgesellschaft Steuerberatungsgesellschaft, Münster, and issued with an unqualified audit opinion, gave rise to no objections. The Supervisory Board concurred with the findings of the statutory auditor.

Likewise, the Supervisory Board's own detailed review of the consolidated financial statements and Group management report for the 2025 financial year, which had been audited by Clauß Paal & Partner mbB Wirtschaftsprüfungsgesellschaft Steuerberatungsgesellschaft, Münster, and issued with an unqualified audit opinion, also gave rise to no objections. The Supervisory Board likewise concurred with the findings of the Group auditor.

The assessments made by the Management Board in the management report and Group management report are consistent with the reports submitted to the Supervisory Board during the year. Based on its own assessment of the position of Nynomic AG and the Group, as well as its own forecast of future developments, the Supervisory Board has reached the same conclusions as the Management Board. In the opinion of the Supervisory Board, the management report and Group management report present a realistic view of the position of Nynomic AG and the Group, as well as their future prospects.
Following its final review of the annual financial statements and management report of Nynomic AG for the 2025 financial year, the Management Board's proposal regarding the appropriation of retained earnings, the consolidated financial statements and the Group management report for the 2025 financial year, the Supervisory Board raised no objections to any of these documents.

Against this background, at its balance-sheet meeting held on 7 May 2026, the Supervisory Board approved the annual financial statements and management report for the 2025 financial year prepared by the Management Board, as well as the consolidated financial statements and the Group management report for the 2025 financial year. The annual financial statements of Nynomic AG for the 2025 financial year have therefore been adopted.

Changes in the composition of the Supervisory Board and the Management Board

There were no changes in the composition of either the Supervisory Board or the Management Board during the 2025 financial year.

The Supervisory Board would like to express its sincere appreciation to the employees of the Nynomic Group for their commitment and contributions during the past financial year. The Supervisory Board would also like to thank the shareholders for their continued support.

Wedel, May 2026

For the Supervisory Board

Hans Wörmcke
Chairman of the Supervisory Board

A future built on Substance – Efficiency, Innovation and uncompromising Quality

Our principles are based on technological expertise and entrepreneurial responsibility and are aimed at delivering measurable progress and long-term value creation.

Technology leadership through customer-focused innovation

Nynomic is an internationally active technology group focused on the development and manufacture of high-precision solutions and products for permanent, non-contact and non-destructive optical measurement technology. Through the implementation of innovative photonic measurement technology, we offer a broad range of services for a wide variety of applications. We guarantee the highest quality and safety standards, as well as the flexibility to quickly and precisely meet individual requirements.

The advanced production technologies of the Nynomic Group reduce unit costs, promote miniaturisation and enable innovative applications that replace conventional solutions and open up new market opportunities. This enables our customers to increase their profitability and secure sustainable competitive advan-

tages in a dynamic environment. Our customer base is diverse, ranging from medium-sized manufacturers to globally operating corporations. Long-standing, successful partnerships with key customers are of great importance to us. Mutual trust and a deep understanding of our partners' needs form the foundation of these relationships. This enables us to anticipate future trends at an early stage and develop products tailored to them. With a focus on profitability, cost awareness and efficiency, we transform potential into tailor-made solutions and, as a trusted partner, set new standards in the industry.

We remain firmly focused on sustainable growth and profitability, driven by innovation, operational excellence and a strong customer focus. Through the targeted development of profitable markets and the continuous optimisation of our value chain, we aim to create measurable added value for all stakeholders. Our entrepreneurial activities combine economic success with social and environmental responsibility to create long-term value.

Future oriented business segments and markets

The operating activities of the Nynomic Group focus on three forward-looking, high-growth segments whose strategic orientation is aligned with the requirements of their respective target markets and applications. Structural megatrends such as demographic change, digitalisation, artificial intelligence, resource scarcity and the global focus on sustainability are creating attractive market opportunities for us. Increasing regulatory requirements are strengthening market momentum and creating additional growth opportunities.

Green Tech Segment: Innovations for sustainable agriculture

Nynomic develops highly precise, customised high-tech solutions for agriculture and environmental technology. The growing demand for sustainability, environmental protection and efficient resource utilisation requires intelligent solutions for smart farming – a market experiencing rapid growth as part of the Agriculture 4.0 trend. Thanks to state-of-the-art sensor technology, Nynomic's solutions support, among other things, precise soil and crop analysis, real-time quality control of harvests and optimised remote-controlled livestock feeding. In addition, our spectrometric sensors can determine fertiliser requirements directly on agricultural machinery, enabling automated, demand-driven fertiliser application that optimises resource utilisation and reduces groundwater contamination. Our portfolio also includes next-generation NIR-based sensors that provide quantitative constituent analysis of maize and slurry as a dual-use solution and have been developed as plug-and-play systems in close collaboration with partners.

The portfolio is further enhanced by a wide range of new and innovative data-processing functionalities, including AI-based models embedded directly in the device (AI on Device). These enable even more precise analysis and intelligent real-time process control, both in agriculture and in related fields such as environmental and agricultural engineering. As a result, our customers benefit not only from greater efficiency but also from improved compliance with regulatory quality standards. In this way, Nynomic combines innovative technologies with sustainable agriculture – helping to create a profitable and future-proof agricultural sector.

Clean Tech segment: Efficient high-tech solutions for industry

In this segment, Nynomic offers a broad range of forward-looking technologies for the industrial sector as a whole. From highly precise optical sensors to customised turnkey systems, Nynomic's solutions optimise processes, increase efficiency and set new standards in industrial quality assurance. In the semiconductor industry, optical measurement systems improve efficiency and precision in the production of micro-LEDs and lasers, among other applications. At the same time, spectroscopic solutions ensure consistently high quality by precisely monitoring coating processes in lithography and in the production of wafers and displays. In addition, in-line metrology solutions support precise process monitoring in key semiconductor manufacturing steps such as etching, deposition, coating and stripping. In the photovoltaic industry, our in-process measurement solutions provide precise optical quality control in modern thin-film production lines,

including the manufacture of perovskite solar glass. Nynomic's intelligent machine vision and ADAS technologies are also setting new standards in the automotive sector: Highly precise testing and calibration solutions enhance camera, LiDAR and radar systems – a crucial step towards autonomous driving.

From the chemical and food industries to semiconductor manufacturing, automated inspection systems such as our new plug-and-play spectroscopy platform enable more precise quality control and higher production standards. In addition, the gas sensor portfolio has been expanded to support new applications in industrial monitoring and agriculture, offering even lower detection limits. The portfolio is complemented by integrated data processing and AI-based models embedded directly in the device, which are already being deployed successfully in the process industry. In this way, Nynomic is setting new standards for automated quality control and sustainable production processes.

Life Science segment: Forward-looking technologies for medicine and research

In this segment, Nynomic offers highly precise technologies for the pharmaceutical, medical technology and biotechnology industries. By leveraging state-of-the-art sensor technology, the Group enhances efficiency and precision in research, diagnostics and pharmaceutical manufacturing.

These innovative solutions enable optimised workflows, more precise analyses, improved reproducibility of results and seamless quality control. For example, Nynomic improves efficiency and flexibility in laboratory blood diagnostics through automated systems and sample preparation solutions. In addition, automated sample-handling and spectroscopy-based online measurement systems enable high-throughput diagnostic processes, including sample qualification as well as pre- and post-analytical procedures through to molecular diagnostics and PCR. With its mobile analytical devices, Nynomic replaces costly laboratory testing with immediate results. NIRONE-based real-time analysis systems are deployed directly in high-speed tablet presses, monitoring every individual tablet at full production speed for uniformity, active ingredient content and potential counterfeit products, thereby supporting flexible small-batch production and rapid product changeovers. PURPL Pro, a portable cannabis testing system, measures moisture content and active ingredient concentration with laboratory-grade precision and supports producers operating in regulated markets. TactiScan, the first reusable drug-screening device, identifies illicit substances directly through packaging without the need for chemical reagents or complex sample preparation.

Thanks to exclusive patent and licensing rights in analytical technology, Nynomic continues to unlock new opportunities for the medicine of the future. Through innovative technologies and strong partnerships, the company is setting new standards in the life science industry – delivering greater efficiency, safety and quality in medicine and research.

Buy & Build – Dynamic growth through strategic acquisitions

With ten subsidiaries worldwide, Nynomic, as a leading provider of innovative non-contact optical measurement technology, secures direct market access, strengthens customer proximity and optimises its sales and logistics structures. The Group covers the entire photonics value chain, offering varying levels of vertical integration and customised product adaptations, from high-quality components to complete instruments. This is complemented by software solutions and additional services, including application-specific support for the implementation of our solutions. Nynomic is making targeted investments in the expansion of a Group-wide cloud platform and the systematic deployment of artificial intelligence and neural networks. This includes, in particular, the use of LLMs and the development of powerful AI agents.

The strategic management of the Group by Nynomic AG as a holding company promotes vertical integration and maximises synergies for sustainable success. The close integration of the subsidiaries accelerates access to future-oriented technologies while simultaneously enhancing innovation and process

efficiency. In addition to production facilities, which are primarily located in Europe, the Group's international subsidiaries and sales locations provide local and direct customer support.

The targeted diversification of our product portfolio and our ongoing global expansion enable us to minimise market risks, leverage synergies and achieve sustainable profitable growth. High quality and reliability are core values of the Group - from development and production through to delivery and product-related services.

Tailor-made solutions from a single source:
The high-quality optical measurement cells and spectrometers developed by Avantes form the foundation of the portfolio. tec5 builds on this core technology by combining components into powerful system solutions and generating greater added value. m-u-t leverages synergies within the Group to develop innovative applications and bring them to market as series-produced products. The technology portfolio has been strategically expanded to include solutions for the wood-processing industry, environmental and agricultural technology, as well as miniaturised MEMS-based spectral sensors. The investment in LayTec marked another important milestone in strengthening the Nynomic Group's portfolio as a comprehensive solutions provider. LayTec develops and manufactures measurement systems for the semiconductor and photovoltaic industries, as well as for the analysis of large-area surface coatings. LemnaTec expands the portfolio with highly sophisticated sensor and automation technologies for digital plant phenotyping in research and industry. The acquisition of Sensortherm further strengthened the Group's expertise in non-contact temperature measurement. Sensortherm specialises in digital pyrometer technology and enables highly accurate, rapid measurements for demanding applications. Another strategically important step was the investment in Image Engineering, a technology leader in the field of image quality measurement. The continuous advancement of testing and calibration equipment for cameras and multi-sensor systems is setting new industry standards and strengthening the innovative capabilities of the Group as a whole. The acquisition of MGG, a globally recognised specialist in miniature and precision light sources, strengthens the Nynomic Group's technology portfolio across the value chain and contributes to the positive development of the Group as a whole through the consolidation of market expertise, product know-how and the efficient use of resources. The successful strategy of selective acquisitions continued with the investment in NLIR and the full acquisition of art photonics. These investments have secured a leading position for the Nynomic Group in the promising field of mid-infrared (MIR) technology. NLIR's patented upconversion technology enables the scalable use of MIR measurement systems in industrial processes for the first time. As a leading provider of specialty fibres for optical measurement technology, art photonics is setting new standards in this segment.

With its clear, forward-looking growth strategy, Nynomic is committed to systematic acquisitions, strong brands and the continuous advancement of its technology portfolio. Through the intelligent utilisation of synergies and a focus on customer-centric solutions, we safeguard our technology leadership and unlock new growth opportunities.

Highlights 2025

01/2025
Professional Exchange at SPIE Photonics West
Nynomic Group's presence at SPIE Photonics West in San Francisco underscores its international position as a full-service provider of photonic solutions.

03/2025
Measurement Technology for Next-Generation Solar Technologies
The collaboration between LayTec and Caelux is advancing innovative measurement solutions for perovskite solar glass.

06/2025
Nynomic Group at Laser World of Photonics
Five subsidiaries of the Nynomic Group used the leading international trade fair in Munich to strengthen customer relationships, explore market opportunities and showcase technological developments.

01/2025
Commitment to Sustainable Reforestation
Nynomic once again supported the PLANT-MY-TREE® climate protection project, thereby making a tangible contribution to environmental protection.

05/2025
Presence at the Equity Forum Spring Conference
The dialogue with Capital market participants provided an excellent platform for presenting the Nynomic Group's future prospects.

06/2025
Increased Efficiency Through an Intra-Group Merger
The merger of Spectral Engines into m-u-t strengthens the Group structure and enhances operational performance.

06/2025

Forward-looking expansion at LemnaTec

The asset deal with SpexAI GmbH supports the expansion of AI-based solutions for the analysis of plant active ingredients.

08/2025

HIT: Strengthening Capital Market Presence

Participation in the Hamburg Investor Days (HIT) continued the ongoing and trusted dialogue with the investment community.

11/2025

Direct Engagement at the Munich Capital Market Conference (MKK)

Once again this year, the Munich Capital Market Conference provided a platform for dialogue with investors and market participants.

07/2025

Annual General Meeting confirms strategic direction

The resolutions adopted reaffirm the Company's clear strategic direction and provide momentum for its continued development.

10/2025

Further streamlining of the Group structure

The intra-Group merger of APOS into m-u-t enables more efficient resource utilisation and provides fresh impetus for innovation, sales and market presence.

CO2

Photonic innovations for a sustainable future

With photonics as a core competency and a key enabling technology for sustainability, the Nynomic Group makes a valuable contribution to protecting the environment and conserving resources across a wide range of fields. Our three segments – Life Science, Clean Tech and Green Tech – offer significant potential to advance environmental sustainability through photonic high-tech solutions.

Anyone seeking to innovate must be open to new ideas. For Nynomic, this means working in a forward-looking and solution-oriented manner and, at times, embracing unconventional challenges. We consistently harness the dynamism of the photonics industry to help shape new developments, identify changing requirements and continuously adapt and optimise our innovative solutions and product portfolio. Photonic technologies are often superior to alternative methods in terms of sustainability and enable us to make our customers' production processes more environmentally sustainable. The highly efficient and effective applications and processes enabled by photonics demonstrate that economic success and environmental protection are not opposing objectives but can, in fact, reinforce one another. At Nynomic, sustainable business practices and profitable growth are inseparable. We are proud that our innovative, resource-efficient solutions create added value for our customers, our partners, the environment and society. Technological progress and responsible corporate governance go hand in hand at Nynomic. Our corporate culture, built on mutual trust, is dependable and forms the foundation for positive social interaction throughout the Group. With our committed and highly skilled Nynomic team, we safeguard our competitiveness and innovative strength while laying the foundations for long-term growth. We firmly believe that our forward-looking approach to employee development—including support, training, flexible working arrangements and a healthy work-life balance—is a key factor in our success.

It is important to us to provide our stakeholders with a comprehensive understanding of our commitment to a sustainable business model. To this end, we place great emphasis on openness, transparency and adherence to high standards in order to maintain the trust of our stakeholders.

In its latest assessment, the independent ESG rating agency imug rated our sustainability performance as “very good”. This assessment confirms our ongoing commitment to sustainable business practices.

Our objective is to continue to maintain a leading position in the field of sustainability. We firmly believe that our commitment to sustainability not only has a positive impact on the environment and society, but also strengthens the long-term success and resilience of our Group.

The Share

In the 2025 stock market year – as in 2024 – the Scale30 Performance Index largely moved sideways. Nynomic AG shares (German Securities Identification Number (WKN) A0MSN1) are listed in the Scale segment of Deutsche Börse AG and are included in the Scale30 Index, which comprises the most actively traded shares in the Scale segment. On the first trading day of the year, 02.01.2025, the index closed at 979.09 points. On the last trading day, 30.12.2025, it closed at 1,059.08 points.

As in 2024, the focus of equity investors in Germany remained on the larger indices, particularly the DAX. Even in the third year of economic weakness in Germany, smaller mid-cap stocks in particular, reflecting developments in the real economy, continued to be affected by this trend. In addition, substantial outflows from specialised funds led to price dislocations in certain stocks.

Against the backdrop of persistently weak economic conditions on the one hand and the challenging environment in the small-cap segment of the equity markets on the other, the Nynomic share price also declined significantly over the course of the year: The closing price fell from EUR 19.30 on 02.01.2025 to EUR 9.84 on 30.12.2025.

While the Company announced on 11.03. that it had successfully met its 2024 guidance, it revised its expectations for 2025 downward on 12.08. and again on 06.11. as the year progressed. The implementation of the NyFIT2025 efficiency enhancement programme involved one-off expenses of approximately EUR 1.5 million. However, the programme is expected to generate cost savings of approximately EUR 5.0 million to EUR 6.0 million as early as the 2026 financial year. On the revenue side, a general reluctance to invest and project postponements resulting from geopolitical tensions and macroeconomic uncertainty – including those related to trade tariffs – led to a significant downward revision of operational expectations during the reporting year. These factors were also reflected in the valuation of the Nynomic share.

As part of the implementation of the comprehensive NyFIT2025 programme, the Company achieved further efficiency gains through the mergers of Spectral Engines GmbH and APOS GmbH into m-u-t GmbH. In addition, the acquisition of future-oriented business units from SpexAI GmbH, particularly in the field of artificial intelligence, strengthens the strategic positioning of the Nynomic Group with regard to the expected economic recovery.

At the beginning of April, members of the Board of Directors and the Supervisory Board of Nynomic AG acquired Nynomic shares through Directors' Dealings transactions with a total volume in the six-figure euro range at prices between EUR 11.70 and EUR 12.50. These transactions reflect their positive assessment of the Group's medium- and long-term prospects.

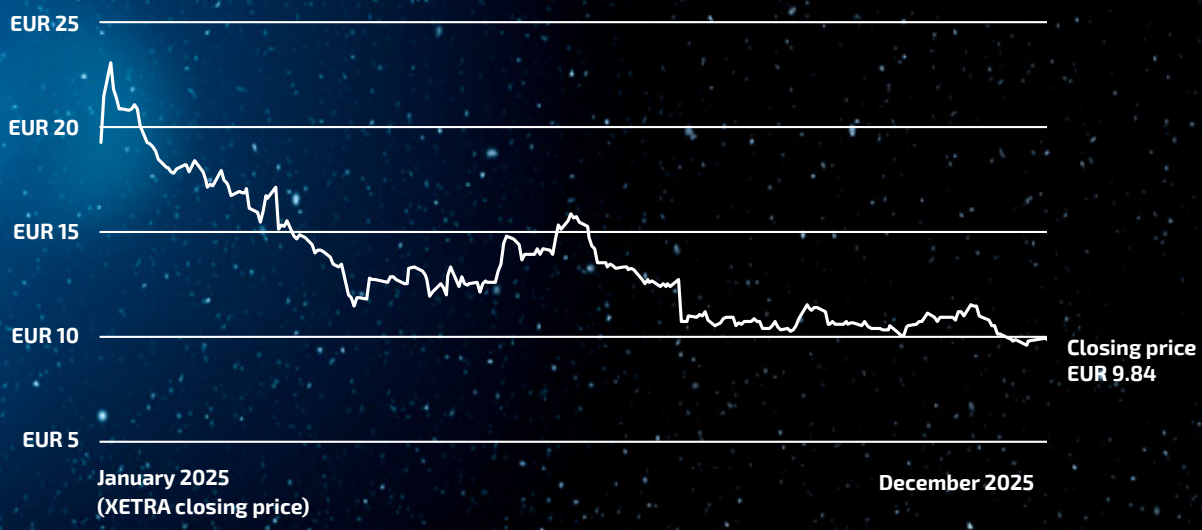

Following significant adjustments during the year, the analyst firms Montega and NuWays now assign target prices of EUR 18.00 and EUR 21.00 respectively (as of March 2026) to the Nynomic share, based on their positive assessment of its future prospects. At the beginning of the second quarter of 2026, these target prices had already been exceeded following a strong rise in the share price.

Key figures

	2025	2024	2023	2022	2021	2020

Active investor relations management

The Nynomic AG share has been listed on Deutsche Börse AG for 19 years.

In this context, the company has long been committed to maintaining a transparent dialogue with shareholders and the wider financial community that goes well beyond regulatory requirements. The objective is to communicate developments within the Group and strategic measures undertaken by the Board of Directors promptly, comprehensively and clearly, thereby increasing transparency regarding the Company's short-, medium- and long-term objectives.

In addition to the mandatory publication of the half-year report and annual report, the company also reports key financial figures for the first and third quarters of each financial year through corporate news and ad hoc announcements.

Now in its twelfth year of publication, the shareholder letter provides information twice a year on current developments and business activities across the various business units of the Nynomic Group. In addition to the shareholder letter, interested parties can receive further relevant and up-to-date information by email following a simple one-time registration on the dedicated investor relations website at nynomic.com.

Corporate information, the current Group structure, the latest company presentation, ad hoc and corporate news announcements, financial reports, shareholder letters, the Annual General Meeting report, the current financial calendar and research reports on the Nynomic share are available at any time on the investor relations website.

Two research firms, NuWays AG and Montega AG, regularly comment on the Company's fundamental prospects and provide their independent assessments of the valuation and performance of the Nynomic share.

Nynomic AG also uses a wide range of channels for direct communication with the financial community. During earnings calls on 07.03. and 12.08., at the Annual General Meeting held in Wedel on 08.07., at the Hamburg Investor Days HIT on 27./28. August and at the Munich Capital Market Conference MKK on 12./13. November, the Management Board used these events in 2025 to engage directly with investors and highlight the potential for a positive revaluation of the Group from 2026 onwards.

1. Description of the Group's business activities

Nynomic AG (hereinafter also referred to as the "Company"), headquartered at Am Marienhof 2 in Wedel, Germany, is the parent company of the Nynomic Group. These consolidated financial statements cover the Company and its subsidiaries (hereinafter referred to collectively as the "Group" or "Nynomic"). Nynomic AG is registered in the commercial register of the Local Court of Pinneberg under registration number HRB 6913 PI.

Nynomic AG is listed on the open market, which does not constitute an organised market within the meaning of Section 2 XI of the German Securities Trading Act (WpHG). The shares are traded in the Scale SME segment of Deutsche Börse AG in Frankfurt.

The Nynomic Group is a provider of serial products and solutions for technologically demanding markets in non-contact and non-destructive optical measurement technology, enabling customers to optimise a wide range of applications in a resource-efficient and environmentally sustainable manner.

2. Basis of preparation

The consolidated financial statements of Nynomic AG and its subsidiaries for the financial year ended 31 December 2025 have been prepared in accordance with the International Financial Reporting Standards (IFRS) as adopted by the European Union (EU), together with the supplementary commercial-law requirements applicable pursuant to Section 315e of the German Commercial Code (HGB).

The consolidated financial statements are supplemented by a Group management report and additional disclosures required under Section 315e HGB. The comparative prior-year figures were determined using the same accounting principles.

Share option programmes:

The Group has established two share option programmes under which certain executives and other selected employees have been granted options to subscribe for shares in Nynomic AG. Further information regarding the valuation of these programmes is provided in Section 11.1.

Original Share Option Programme

During the reporting year, none of the option holders exercised options under the share option programme ("Conditional Capital 2014/I" pursuant to the Resolution of the Annual General Meeting of 6 June 2014). As a result, there was neither an increase in equity nor an increase in cash and cash equivalents during the 2025 calendar year. At the Annual General Meeting held in July 2024, the Board of Directors was authorised to increase the share capital by up to a total of kEUR 1,311 through cash and/or non-cash contributions by issuing new no-par-value bearer shares. Of the share options already granted, 70,000 share options remained exercisable as at 31 December 2025.

Virtual Share Option Programme

With the approval of the Supervisory Board, the Board of Directors of Nynomic AG resolved to offer virtual share options to executives of the Company and its subsidiaries as part of performance-related target agreements. The programme constitutes a voluntary benefit provided by the Company. Virtual share options could be granted until 2024. The programme has since been discontinued and no further options may be granted.

The virtual share options entitle the respective beneficiary to a cash payment upon achievement of specified corporate targets and individual performance targets.

The beneficiaries are not granted any rights to shares, share options, subscription rights, or the acquisition or subscription of shares.

The granted share options may first be exercised after a four-year vesting period from the grant date

and within a subsequent five-year exercise period. Options not exercised lapse without compensation nine years after the grant date. The programme comprises a total of 507,000 options, of which 289,500 options have already been granted under target agreements, including 32,500 options that lapsed in 2025. The share options cannot be exercised if the performance condition is not met.

3. Measurement bases

The consolidated financial statements are generally prepared on the basis of the historical cost convention. The consolidated financial statements are presented in euros, the Company's functional currency. Unless otherwise stated, the financial information presented has been rounded to the nearest thousand euros (TEUR). Rounding differences may occur between the figures presented and the mathematically exact values (amounts and percentages).

The Group has prepared its financial statements on the assumption that it will continue as a going concern.

The financial statements of the subsidiaries were prepared as at the reporting date of the consolidated financial statements, which corresponds to the reporting date of Nynomic AG. The consolidated financial statements cover the reporting period from 1 January to 31 December 2025. The consolidated profit and loss statement has been prepared using the total cost method. Other comprehensive income is presented in the consolidated statement of comprehensive income.

The preparation of the consolidated financial statements in accordance with IFRS as adopted by the EU requires management to make assumptions and estimates affecting the recognition of certain items in the Group balance sheet and statement of comprehensive income. These estimates are based on the historical experience of management.

The monetary amounts reported in the consolidated financial statements that are subject to estimation uncertainty are reviewed on an ongoing basis. The preparation of the consolidated financial statements therefore requires management to exercise judgement in certain areas.

This primarily relates to:

- the assessment of the recoverability of goodwill, particularly with regard to estimating future cash flows
- the estimation of the useful lives of intangible assets and property, plant and equipment
- the estimation of the fair value of virtual share option programmes as a component of remuneration

Actual results may differ from these estimates and assumptions.

4. Principles of consolidation

Scope of consolidation

In addition to Nynomic AG, the consolidated financial statements include all subsidiaries that are directly or indirectly controlled by Nynomic AG. Control is deemed to exist where the Group is exposed to variable returns from its involvement with an entity and has the ability to affect those returns through its power over the entity. Consolidation ceases when the Group loses control of a subsidiary.

Associates are entities over which Nynomic AG has significant influence but neither control nor joint control. These entities are included in the consolidated financial statements using the equity method.

The composition of the scope of consolidation is shown in the table below:

	31.12.2025	31.12.2024
Consolidated subsidiaries	**24**	**26**
of which: Domestic	10	12
of which: Foreign	14	14
Associates	**1**	**1**
of which: Domestic	0	0
of which: Foreign	1	1

The following entities form part of the scope of consolidation and have been included in the consolidated financial statements:

	Equity interest (%)
m-u-t GmbH, Wedel	100.00
together with their affiliated companies and respective equity interests:	
APOS IP GmbH, Wedel **	100.00

* = Reclassification following the merger of Spectral Engines GmbH into m-u-t GmbH with effect from 01.01.2025.
** = Reclassification following the merger of APOS GmbH into m-u-t GmbH with effect from 01.07.2025.

Changes to the scope of consolidation

There were no acquisitions or disposals of subsidiaries during the 2025 financial year.

Consolidation methods

The assets and liabilities of the domestic and foreign entities included in the consolidated financial statements are recognised using uniform accounting and valuation methods applied consistently throughout the Group.

The financial statements of the consolidated entities prepared in foreign currencies are translated in accordance with the concept of the functional currency pursuant to IAS 21 "The Effects of Changes in Foreign Exchange Rates" using the modified current rate method. As the subsidiaries conduct their business activities independently in financial, economic and organisational terms, the functional currency of the respective entities generally corresponds to the respective local currency.

Accordingly, assets and liabilities are translated at the closing rate, while income and expenses are translated at average rates determined on a monthly basis. Exchange differences arising from currency translation are recognised directly in equity and presented separately under the item "Currency translation reserve". Items of equity are translated at historical exchange rates. The following exchange rates were used for the

currencies relevant to currency translation:

		Average exchange rate		Closing rate	
	1 EUR =	2025	2024	2025	2024
China	RMB	8.11850	7.78750	8.22620	7.58330
Great Britain	GBP	0.85679	0.84662	0.87260	0.82918
Hong Kong	HKD	8.81040	8.44540	9.14640	8.06860
USA	USD	1.13000	1.08240	1.17500	1.03890
Denmark	DKK	7.46340	7.45890	7.46890	7.45780

If Group entities are removed from the scope of consolidation, the related currency translation differences are recognised in profit or loss.

Capital consolidation is carried out using the acquisition method in accordance with IFRS 3 and IFRS 10.

Formation of new companies and business acquisitions

Initial consolidation takes place at the acquisition date, i.e. the date on which control over the acquired entity is obtained. The Company obtains control when it has power over the investee, is exposed to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.

The acquired assets, liabilities and contingent liabilities are measured at their fair values at the acquisition date.

The acquisition cost of the acquired interests is subsequently offset against the proportionate share of the remeasured equity of the subsidiary.

Any resulting positive difference is recognised as goodwill under intangible assets. Any negative difference is recognised immediately in profit or loss after reassessment.

In subsequent periods, goodwill is subject to an annual impairment test in accordance with IAS 36.

Receivables and liabilities as well as income and expenses between consolidated entities are eliminated. Intra-Group deliveries and services are carried out both on the basis of market prices and transfer prices determined in accordance with the arm's-length principle. During the reporting period, material unrealised profits in inventories arising from intra-Group transactions existed. Consolidation adjustments affecting profit or loss are subject to the recognition of deferred taxes.

Interests in associates are accounted for using the equity method. They are initially recognised at acquisition cost. Any acquired goodwill is not presented separately but is included in the carrying amount. Following initial recognition, the consolidated financial statements include the Group's share of the results up to the date on which significant influence or joint control ceases.

No new subsidiaries were acquired during the 2025 calendar year.

Discontinued operation

A discontinued operation in accordance with IFRS 5 is a component of the Group's business whose operations and cash flows can be clearly distinguished from the rest of the Group and that has either been disposed of or is classified as held for sale and:

- constitutes a separate major line of business or geographical area of operations;
- is part of a single coordinated plan to dispose of a separate major line of business or geographical area of operations;

or

- is a subsidiary acquired exclusively with a view to resale.

A component is classified as a discontinued operation upon disposal or, if earlier, when it meets the criteria for classification as held for sale.

Where a component is classified as a discontinued operation, the consolidated statement of compre-

hensive income for the comparative year is adjusted as if the operation had been discontinued from the beginning of the comparative year.

5. Significant accounting- and measurement policies

Going concern

At the date of approving the financial statements, the Board of Directors had a reasonable expectation that the Group has adequate resources to continue operating for the foreseeable future. Accordingly, the consolidated financial statements have been prepared on a going concern basis.

Accounting and measurement policies

The assets and liabilities of domestic and foreign subsidiaries included in the consolidated financial statements by way of full consolidation are recognised using uniform accounting and valuation methods.

Presentation

In accordance with IAS 1.60 et seq., a distinction is made in the balance sheet between current and non-current assets and current and non-current liabilities.
An asset is classified as current if:
- its realisation is expected within the normal operating cycle or it is held for sale or consumption within that period;
- it is held primarily for trading purposes;
- its realisation is expected within twelve months after the reporting date;

or
- it is cash or cash equivalents, unless its exchange or use to settle a liability is restricted for at least twelve months after the reporting date;

All other assets are classified as non-current.

A liability is classified as current if:
- its settlement is expected within the normal operating cycle;
- it is held primarily for trading purposes;
- its settlement is expected within twelve months after the reporting date;

or
- the Company does not have an unconditional right to defer settlement of the liability for at least twelve months after the reporting date.

All other liabilities are classified as non-current.

Deferred tax assets and deferred tax liabilities are classified as non-current assets and non-current liabilities.

Judgements in applying accounting and measurement policies

Non-current intangible assets and property, plant and equipment are recognised in the balance sheet at amortised historical cost. The alternative option of measuring these assets at fair value has not been exercised.

Goodwill

In accordance with IFRS 3, goodwill represents the excess of the purchase consideration transferred for an entity or business over the fair value of the identifiable acquired and remeasured assets and liabilities. Goodwill is not amortised on a scheduled basis but is tested for impairment at least annually in accordance with the requirements of IAS 36.

For the purpose of the impairment test, value in use is determined on the basis of the medium-term planning prepared by management. The planning assumptions are adjusted to reflect current circumstances. Appropriate assumptions are applied taking into account macroeconomic trends and historical developments. The calculations take into account the growth rate of the relevant market segment. This currently ranges between 1% p.a. and 2% p.a. Discount rates ranging from 8% p.a. to 11% p.a. were applied in determining the value in use. The discount rate reflects the risk-adjusted minimum required rate of return derived from the capital market.

Internally generated intangible assets

Internally generated intangible assets primarily com-

prise control software capitalised at production cost and fully amortised during the financial year. Intangible assets with a finite useful life are amortised on a straight-line basis over their economic useful life.

Development costs are capitalised as intangible assets where all recognition criteria for internally generated intangible assets under IAS 38 are met. Where all criteria for the capitalisation of development costs are met, all directly attributable costs are capitalised. Following the successful completion of the development project, the capitalised development costs are amortised over the planned product life cycle.

Acquired intangible assets

Acquired intangible assets are recognised at cost and, where amortisable, are amortised on a straight-line basis over their useful lives (1–10 years).

Property, plant, and equipment

Property, plant and equipment are measured at acquisition or production cost and, where depreciable, less accumulated depreciation. The depreciation method reflects the expected pattern of consumption of future economic benefits. Depreciation expense is generally determined using the straight-line method. The depreciation period is determined on the basis of the expected useful life.

Production cost comprises directly attributable direct costs together with an appropriate share of directly attributable material and production overheads, including production-related depreciation.

The following useful lives are applied for scheduled depreciation:

Asset category	Useful life
Buildings	10 - 50 years
Machinery and technical equipment	1 - 19 years
Other plant, operating and office equipment	1 - 23 years

Lease accounting under IFRS 16

A lease liability is recognised at the commencement date of each lease, including leases classified as operating leases. The lease liability is measured at the present value of future lease payments. Future lease payments are discounted using country-specific incremental borrowing rates ranging from 1.50% to 3.81% as at the reporting date.

Right-of-use assets are recognised at cost. On initial recognition, these comprise the corresponding lease liability, lease payments made at or before the commencement date, initial direct costs and estimated restoration or dismantling costs.

Lease payments that have not been capitalised in accordance with IFRS 16 are included in the operating expenses of the period. These relate to short-term leases (less than one year), low-value leases and variable lease payments that are not based on an index.

Impairment losses

Goodwill and assets not yet available for use are not amortised but are tested annually for impairment as of the reporting date.

For property, plant and equipment and intangible assets with a finite useful life, an assessment is made at each reporting date as to whether there are indications of impairment for the respective assets in accordance with IAS 36 "Impairment of Assets". Where such indications are identified for individual assets, an impairment test is performed. As part of the impairment test, the recoverable amount of the asset is determined and compared with its carrying amount in order to identify any impairment loss.

Fair value less costs of disposal is the amount obtainable from the sale of an asset in an arm's length transaction between knowledgeable, willing parties. Value in use is determined on the basis of discounted expected future cash inflows. A market-based pre-tax discount rate is applied that reflects the risks specific to the asset which have not already been reflected in the estimated future cash inflows.

Where the recoverable amount of an asset is estimated to be lower than its carrying amount, the asset is written down to its recoverable amount. Where an impairment loss is reversed in a subsequent period, the carrying amount of the asset is adjusted to its recoverable amount.

The reversal of impairment may not increase the carrying amount of the asset above the amount that would have resulted from acquisition or production cost, less accumulated depreciation or amortisation, had no impairment loss been recognised in prior periods. The reversal of impairment is recognised immediately in profit or loss.

Inventories

Inventories are measured at the lower of cost and net realisable value in accordance with In accordance with IAS 2, net realisable value represents the estimated selling price less the estimated costs of completion and the estimated costs necessary to make the sale. The cost of inventories comprises all costs of purchase and other costs incurred in bringing the inventories to their present location and condition. Purchase price reductions such as discounts, rebates and cash discounts are taken into account. Production cost comprises production-related full costs determined on the basis of normal capacity utilisation. In addition to direct costs, production cost includes an appropriate proportion of necessary material and production overheads as well as production-related depreciation that can be directly attributed to the manufacturing process. In particular, costs incurred in the respective cost centres are taken into account. Where values at the reporting date are lower due to declining market prices, those lower values are recognised. If the reasons for a write-down no longer exist and net realisable value has increased, the reversal is recognised in the period in which the change occurs as a reduction in the cost of materials. If the reasons for a write-down no longer exist and net realisable value has increased, the reversal is recognised in the period in which the change occurs as a reduction in material expenses.

The inclusion of borrowing costs pursuant to IAS 23 in the determination of production cost for work in progress and finished goods is not considered necessary due to the lack of relevance of long production periods.

Financial instruments

Financial instruments are contracts that give rise to a financial asset of one entity and a financial liability or equity instrument of another entity. In accordance with IAS 32, these include primary financial instruments such as trade receivables and payables, other financial assets and financial liabilities. On the other hand, they also include derivative financial instruments used as hedging instruments to hedge risks arising from changes in foreign exchange rates and interest rates. Financial assets and financial liabilities are recognised in the consolidated balance sheet when the Group becomes a party to the contractual provisions of the instrument.

Financial instruments are classified and measured as financial assets and financial liabilities at amortised cost, as appropriate.

The amortised cost of a financial asset or financial liability is the amount at which it was initially recognised, less principal repayments, adjusted for impairment losses and including the cumulative amortisation of any difference between the initial amount and the maturity amount using the effective interest method. This difference is allocated over the term of the financial asset or financial liability using the effective interest method.

For short-term receivables and liabilities, amortised cost generally corresponds to the nominal amount or repayment amount.

Primary financial instruments

The Company's primary financial instruments consist principally of cash and cash equivalents, trade receivables and payables, short-term and long-term borrowings, and other financial assets and liabilities.

Due to their short-term nature, trade receivables are non-interest-bearing and are recognised at nominal value less expected credit loss allowances. Both individual default risks and default risks derived from historical experience for groups of receivables with similar risk characteristics (portfolio-based impairment allowances) are recognised through the use of an allowance account. Where a receivable is determined to be uncollectible, it is written off against the corresponding impairment allowance.

Other receivables and assets are measured at amortised cost. Appropriate impairment allowances are recognised for all identifiable default risks. Material long-term non-interest-bearing or below-market-interest receivables are discounted.

In the 2025 financial year, no material impairment losses were required for financial assets other than trade receivables.

Cash and cash equivalents comprise cash on hand and demand deposits with banks having an original maturity of up to three months. These are recognised at nominal value.

Financial liabilities are generally measured at amortised cost using the effective interest method. This does not apply to financial liabilities measured at fair value through profit or loss.

An equity instrument is any contract that evidences a residual interest in the assets of the Group after deducting all of its liabilities. Issued shares are recognised as equity; costs directly attributable to the issuance of the Company's own shares are deducted from equity.

Income taxes

Income taxes comprise current income taxes (paid or payable) in the respective countries as well as deferred tax assets and liabilities. The Group's current income taxes are calculated using the tax rates applicable at the reporting date.

Deferred taxes

Deferred taxes are recognised and measured in accordance with IAS 12 "Income Taxes". Deferred tax assets and deferred tax liabilities are presented separately in the balance sheet in order to reflect the future tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and their tax bases, as well as of tax loss carryforwards.

Deferred tax assets and deferred tax liabilities are measured using the tax rates expected to apply in the period in which the temporary differences reverse. The effects of changes in tax rates on deferred taxes are recognised in the reporting period in which the legislative process giving rise to the tax rate change is completed.

Deferred tax assets arising from temporary differences and tax loss carryforwards are recognised only to the extent that it is probable that sufficient taxable profit will be available against which they can be utilised.

Deferred tax assets and deferred tax liabilities are offset where they relate to the same taxation authority and a legally enforceable right of offset exists. In accordance with IAS 12, deferred tax assets and deferred tax liabilities are not discounted.

For domestic companies, deferred taxes are calculated using a tax rate of 30%. In addition to corporate income tax, including the solidarity surcharge of 15% thereon, an effective trade tax rate of 15% is taken into account. The future reduction in the corporate income tax rate has already been anticipated.

For foreign companies, deferred taxes are calculated using the tax rates applicable in the respective countries. Deferred taxes are recognised as tax income or tax expense unless they relate to items recognised directly in other comprehensive income. In such cases, the deferred taxes are likewise recognised directly in other comprehensive income.

Provisions

In accordance with IAS 37 "Provisions, Contingent Liabilities and Contingent Assets", provisions are recognised where a present obligation to a third party arising from a past event exists, an outflow of resources is probable and the amount of the obligation can be estimated reliably. Other provisions are recognised only for legal or constructive obligations to third parties where, at the reporting date, an outflow of resources is more likely than not.

Where the effect of the time value of money is material, provisions are measured at the present value of the expected settlement amount. The settlement amount also includes expected future increases in prices and costs. Discounting is based on pre-tax interest rates that reflect current market assessments of the time value of money and the risks specific to the obligation. The interest expense arising from the unwinding of the discount is recognised in finance costs.

Provisions are measured on the basis of historical experience, taking into account the circumstances prevailing at the balance sheet date. Warranty provisions are recognised on both an individual and a collective basis. The amount of the provision is based on historical warranty experience and an assessment of all current and potential future warranty claims, weighted according to their probability of occurrence.

Revenue

Revenue comprises income generated from the Group's ordinary activities (IFRS 15). This primarily includes revenue from the sale of goods and the rendering of services.

Revenue from the sale of goods is recognised when control of the goods passes to the customer, the performance obligation has been satisfied, the transaction price is determinable and collection is probable. Revenue is presented net of sales deductions and cash discounts and represents the consideration expected in exchange for goods delivered and services rendered.

Revenue from services is recognised based on the stage of completion of the contract at the balance sheet date (IFRS 15.39 et seq.). The stage of completion of the contract is determined using an output method based on the services performed. Revenue is recognised only when it is probable that the economic benefits associated with the transaction will flow to the Group. Otherwise, revenue is recognised only to the extent that the expenses incurred are recoverable.

If a contract contains multiple distinct performance obligations (IFRS 15.22 et seq.), they are accounted for separately in accordance with the principles described above.

Earnings per share

Basic earnings per share are calculated by dividing the consolidated net income attributable to the shareholders of the parent company by the weighted average number of ordinary shares outstanding during the respective period.

For the purpose of calculating diluted earnings per share, the profit attributable to holders of ordinary shares of the parent company is divided by the weighted average number of ordinary shares outstanding during the year plus the weighted average number of ordinary shares that would result from the conversion of all dilutive potential ordinary shares into ordinary shares.

The following table sets out the amounts used in the calculation of basic and diluted earnings per share:

	2025 in kEUR	2024 in kEUR
Consolidated net income attributable to holders of ordinary shares of the parent company	-704	-643
thereof from continuing operations	-704	3,357
thereof from discontinued operations	0	-4,000

	2025	2024
Weighted average number of ordinary shares for the calculation of basic earnings per share*	**6,568,820**	**6,558,164**
Potential dilutive effects from:		
Share options	70,000	75,000
Weighted average number of ordinary shares adjusted for the dilutive effect	**6,638,820**	**6,633,164**

* The weighted average number of shares includes the weighted-average effect of changes in treasury shares during the financial year.

	2025 in EUR	2024 in EUR
Earnings per share		
thereof from continuing operations		
Basic earnings per share based on profit attributable to holders of ordinary shares of the parent company	-0.11	0.51
Diluted earnings per share based on profit attributable to holders of ordinary shares of the parent company	-0.11	0.51
of which from discontinued operations		
Basic, earnings per share based on profit attributable to holders of ordinary shares of the parent company	0.00	-0.61
Diluted, earnings per share based on profit attributable to holders of ordinary shares of the parent company	0.00	-0.60

Apart from the existing share option programme, no convertible or option rights were outstanding. As in the previous financial year, no dilutive effects arose.

6. Discontinued operations

6.1 Current financial year

There were no discontinued operations in the 2025 financial year. As part of the NyFit2025 optimisation programme, cost-reduction measures were implemented, including two intra-Group mergers.

6.2 Prior year: Exit from the Finnish market

As part of a strategic realignment, Nynomic AG decided in 2024 to relocate Spectral Engines' operating activities from Finland. The operating activities of Spectral Engines (production, development, sales and administration), including its business segments (NIRON, TactiScan and Purpl), were transferred from Finland to the Group's locations in Wedel (including production) and Steinbach (including administration and sales). The Finnish site was closed. The legal entity Spectral Engines Oy and a strategic supplier relationship remain in Finland.

The relocation to Germany was considered necessary due to the complexity of the supply chain and the sales focus on pharmaceutical applications and solutions for public authorities and emergency services.

The goodwill allocated to the Finnish site, amounting to EUR 4.0 million, was therefore fully impaired in 2024. All functions, including development and production, can be fully covered by the Steinbach and Wedel locations.

6.3 Analysis of prior-year results from discontinued operations (IFRS 5.33)

The above-mentioned operation had not previously been classified as a discontinued operation in 2024. Following its relocation and closure, this business segment constitutes a discontinued operation due to its significance for the Earnings, net assets and financial position of Spectral Engines and is therefore classified as a discontinued operation within the meaning of IFRS 5.

For this reason, the result from discontinued operations was presented separately in the statement of profit or loss in the comparative prior-year period. A breakdown of the individual profit or loss items relating to the discontinued operation was not presented in 2024 due to immateriality.

The total result of the discontinued operation of EUR -4.0 million comprises, in addition to the operating result of EUR 0.0 million recognised up to the date of disposal, primarily the effects of the IFRS 5 impairment of EUR -4.0 million.

7. New and amended accounting standards and interpretations

7.1 Standards, interpretations and amendments applied for the first time in the current financial year

The Group applied the new and amended standards and interpretations presented below for the first time in the current financial year.

Standard		Mandatory effective date in the EU	Amendments	Impact on Nynomic
IAS 21 (Amendments)	Lack of Exchangeability	01.01.2025	The amendment relates to the determination of the exchange rate when exchangeability is lacking on more than a temporary basis.	No material impact

7.2 Standards, interpretations and amendments issued but not yet applicable

The IASB has issued, among others, the following accounting standards, which are not yet mandatory in the EU and have not been early adopted by Nynomic. Standards not included in the overview are of minor significance to Nynomic.

Standard		Mandatory effective date in the EU	Impact on Nynomic
IFRS 9, IFRS 7 (Amendments)	Classification and Measurement of Financial Instruments	01.01.2026	No material impact
IFRS 9, IFRS 7 (Amendments)	Contracts Referencing Nature-dependent Electricity	01.01.2026	No material impact
IFRS 18	Presentation and Disclosure in Financial Statements	01.01.2027	No material impact
IFRS 19	Subsidiaries without Public Accountability: Disclosures	01.01.2027 (expected date of initial application according to the IASB, not yet adopted by the EU)	No material impact

8. Notes to the balance sheet

8.1 Fixed assets

The movements in individual items of property, plant and equipment, including depreciation for the financial year, are presented in the fixed asset schedule.

8.2 Goodwill and Intangible Assets

As at 31 December 2025, goodwill amounted to kEUR 43,303. There were no additions or disposals during the financial year.

For 2025, no significant triggering events were identified for goodwill, nor did the planning data provided indicate any need for impairment. Accordingly, no impairment losses on goodwill were recognised in the 2025 financial year.

In total, scheduled amortisation of intangible assets amounting to kEUR 1,197 (previous year: KEUR 655) was recognised.

8.3 Property, plant and equipment

Additions to property, plant and equipment amounted to kEUR 1,567.

In total, scheduled depreciation of property, plant and equipment amounting to kEUR 1,581 (previous year: KEUR 1,384) and depreciation of right-of-use assets in accordance with IFRS 16 amounting to kEUR 3,198 (previous year: KEUR 3,080) were recognised.

	Rights of use according to IFRS 16				Liabilities
	Land and buildings	Vehicle fleet	Equipment	Total	Total
	in kEUR	in kEUR	in kEUR	in kEUR	in kEUR
Balance at 01.01.2025	12,620	838	175	13,633	14,006
+ Additions	3,528	299	193	4,020	4,020
- Disposals	5	0	0	5	5
- Depreciation	2,709	401	88	3,198	0
- Repayments	0	0	0	0	3,701
+ Interest expense	0	0	0	0	389
Balance at 31.12.2025	**13,434**	**736**	**280**	**14,450**	**14,709**

Lease liabilities bear interest at effective interest rates ranging from 1.5% to 3.8%.

8.4 Investments

Investments are composed as follows as at the reporting date:

in kEUR	31.12.2025	31.12.2024
Investments in associates	1,745	2,205
Total:	**1,745**	**2,205**

The investment in associates consists of the interest held in NLIR ApS. As described in the consolidation principles (see Chapter 4), this associate is accounted for in these consolidated financial statements using the equity method. In the 2025 calendar year, expenses from associates amounting to kEUR 459 (previous year: KEUR 349) were recognised during the reporting period.

8.5 Inventories

Inventories comprised the following as at the reporting date:

in kEUR	31.12.2025	31.12.2024
Raw materials, consumables and supplies	12,193	12,789
Work in progress and uncompleted services	4,012	2,765
Finished goods and merchandise	11,425	15,075
Advance payments	80	244
Total:	**27,710**	**30,873**

8.6 Trade receivables

Trade receivables are composed as follows:

in kEUR	31.12.2025	31.12.2024
Trade receivables	14,524	16,697

The fair values of trade receivables correspond to their carrying amounts at the reporting date.

in kEUR	31.12.2025	31.12.2024
Gross trade receivables	14,964	17,030
Accumulated impairment allowance	-440	-333
Carrying amount of trade receivables	**14,524**	**16,697**

The credit risk associated with receivables from customers is monitored by the respective business unit. Customers' creditworthiness is assessed on an ongoing basis. Individual credit limits are established on the basis of these assessments. Outstanding receivables from customers and contract assets are monitored regularly.

The allowance for expected credit losses is assessed at each reporting date using a provision matrix. As a rule, trade receivables are written off when they are considered uncollectible. The maximum credit risk at the reporting date corresponds to the carrying amount.

The Group considers the concentration of risk relating to trade receivables and contract assets to be low, as its customers are located in different countries,

belong to different industries and operate in largely independent markets.

Credit risk is accounted for through impairment allowances.

8.7 Other current financial assets

in kEUR	31.12.2025	31.12.2024
Claims for refunds of income- and value added taxes	2,124	1,991
Receivables from grant-funded projects	1,176	620
Advance payments	226	126
Refund receivables	214	96
Other	374	297
Total:	**4,114**	**3,130**

As in the previous year, there are no restrictions on the disposal of other current financial assets.

8.8 Other current non-financial assets

in kEUR	31.12.2025	31.12.2024
Prepayments for expenses	715	950

The prepayments primarily relate to payments for services to be received in subsequent periods.

8.9 Cash and cash equivalents

in kEUR	31.12.2025	31.12.2024
Cash on hand and balances with banks	14,463	16,309

For changes in cash and cash equivalents, reference is made to the section “Notes to the Statement of Cash Flows”.

Nynomic AG has entered into a multi-bank framework credit agreement for bilateral credit facilities totalling kEUR 32,000, of which kEUR 21,000 had already been utilised, including by subsidiaries. As at 31 December 2025, the Group had committed undrawn credit facilities of kEUR 12,485 (previous year: kEUR 13,028).

8.10 Equity

The composition and development of equity are presented in the statement of changes in equity.

Subscribed Share Capital

As at the reporting date, the share capital is divided into 6,568,820 no-par-value bearer shares, each representing a notional interest of EUR 1.00 in the share capital. All shares are ordinary shares, each carrying one voting right.

Authorised capital/Conditional capital

By resolution of the Annual General Meeting of 2 July 2024, the Management Board was authorised, with the approval of the Supervisory Board, to increase the Company's share capital by up to kEUR 1,311 until 1 July 2029 through the issuance of new no-par-value bearer shares against cash and/or non-cash contributions (Authorised Capital 2024/I). Authorised Capital 2022/I was cancelled.

By resolution of the Annual General Meeting of 6 June 2014, the share capital was conditionally increased by up to kEUR 479 to service subscription rights arising from share options granted to members of the Board of Directors and employees of the Company as well as members of the management boards or managing directors and employees of affiliated companies (Conditional Capital 2014/I).

Following partial utilisation totalling kEUR 238 in the financial years 2020, 2021 and 2022, Conditional Capital 2014/I amounted to kEUR 241. By resolution of the Annual General Meeting of 29 June 2023, Conditional Capital 2014/I was reduced by kEUR 118 to kEUR 123. Following partial utilisation totalling kEUR 48 in the financial years 2023 and 2024, Conditional Capital 2014/I currently amounts to kEUR 70 (kEUR 5 expired during the current year).

By resolution of the Annual General Meeting of 29 June 2023, the share capital was conditionally increased by up to kEUR 530, divided into up to 529,632 no-par-value bearer shares (Conditional Capital 2023/I). The condi-

tional capital increase serves to satisfy subscription rights arising from share options granted to members of the Management Board and employees of Nynomic AG, as well as members of the management boards or managing directors and employees of affiliated companies.

By resolution of the Annual General Meeting of 2 July 2024, the Company's share capital was conditionally increased by up to kEUR 1,311 through the issuance of up to 1,311,264 no-par-value bearer shares (Conditional Capital 2024/I). The conditional capital increase serves to grant shares to the holders or creditors of convertible or option-linked debt instruments.

Capital reserve

The capital reserve includes amounts realised on the issuance of shares in excess of their notional value (share premium).

Consolidated retained earnings

Consolidated retained earnings result from profit carried forward (kEUR 50,135), plus consolidated net loss after taxes (kEUR 348), less profit attributable to non-controlling interests (kEUR 356).

8.11 Other non-current financial liabilities

in kEUR	31.12.2025	31.12.2024
Liabilities to banks	156	2,503
Lease liabilities under IFRS 16	11,488	10,980
Other liabilities	0	28
Total:	**11,644**	**13,511**

In the previous year, financial liabilities included bank loans used to finance the acquisition of equity interests in companies. These liabilities are secured primarily by debt assumption agreements and guarantees provided by individual subsidiaries. In 2025, financial liabilities include utilised overdraft facilities.

8.12 Trade payables

The following items are included in these current liabilities:

in kEUR	31.12.2025	31.12.2024
Trade payables	3,393	4,069

8.13 Other provisions

in kEUR	31.12.2025	31.12.2024
Other provisions	2,327	3,061

Other provisions comprise sales-related provisions of kEUR 1,123 (previous year: KEUR 2,253), procurement-related provisions of kEUR 55 (previous year: KEUR 64) and other provisions of kEUR 1,149 (previous year: KEUR 744).

8.14 Other current financial liabilities

The following items are included in this balance sheet item:

in kEUR	31.12.2025	31.12.2024
Other liabilities	5,557	6,205
Advance payments received on orders	792	1,209
Liabilities to banks	2,970	2,444
Lease liabilities under IFRS 16	3,221	3,026
Tax liabilities	3,175	2,935
Total:	**15,715**	**15,819**

Tax liabilities include liabilities for payroll tax, church tax, value-added tax and income taxes.

9. Notes to the consolidated statement of profit or loss

9.1 Revenue

Revenue decreased by kEUR -9,846, or -10%, compared with 2024, to kEUR 92,569.

Breakdown of revenue

Revenue is broken down by business activity as follows:

in kEUR	2025	2024
Clean Tech	59,852	68,657
Life Science	11,989	13,130
Green Tech	20,728	20,628
Total:	**92,569**	**102,415**

Revenue is broken down by sales region as follows:

in kEUR	2025	2024
Germany, Europe and other countries	54,114	61,594
America	19,223	23,774
Asia	19,232	17,047
Total:	**92,569**	**102,415**

9.2 Other capitalised own work

Other capitalised own work was measured at cost and primarily comprises personnel costs and direct material costs incurred in the development of internally generated software.

9.3 Cost of materials

Cost of materials is composed as follows:

in kEUR	2025	2024
Cost of raw materials, consumables and supplies and purchased goods	29,146	35,679
Cost of purchased services	1,262	1,136
Total:	**30,408**	**36,815**

The reduction in the cost of materials is attributable to changes in revenue.

9.4 Personnel expenses

in kEUR	2025	2024
Wages and salaries	33,849	35,285
Social security contributions	6,531	6,662
Expenses for pensions and other employee benefits	778	732
Total:	**41,158**	**42,679**

	2025	2024
Average number of employees during the year	538	583

Personnel expenses decreased by kEUR 1,521 compared with the previous year, primarily due to the Group-wide efficiency and optimisation programme "NyFIT2025" implemented during the 2025 financial year.

9.5 Other operating expenses

Other operating expenses remained largely unchanged compared with the previous year. The expenses primarily comprise the following items:

in kEUR	2025	2024
Marketing and travel expenses	2,846	3,436
Costs of external service providers	1,491	1,673
Consulting expenses	859	983
Selling expenses	830	703
Occupancy costs	804	1,247
Vehicle expenses	781	816
Maintenance expenses	720	641
Other expenses	5,611	4,486
Total:	**13,942**	**13,985**

Other operating expenses primarily comprise company- and organisation-related expenses of kEUR 4,177, personnel-related expenses of kEUR 840 and product- and sales-related expenses of kEUR 594.

9.6 Other operating income

Other operating income increased by kEUR 646, or 32%, compared with the previous year to kEUR 2,688. The item primarily comprises the following components:

in kEUR	2025	2024
Other grants and research allowances	943	477
Income from non-cash benefits	179	182
Reimbursements under the German Expenditure Compensation Act (AAG)	122	172
Insurance compensation	28	76
Other income	1,416	1,135
Total:	**2,688**	**2,042**

9.7 Finance income and finance expenses

in kEUR	2025	2024
Other interest and similar income	41	97
Interest and similar expenses	-642	-950
Total:	-601	-853

9.8 Income taxes

in kEUR	2025	2024
Current income taxes	1,458	3,228
Deferred taxes	-209	-774
Total income taxes:	1,249	2,454

As at the reporting date, the Group had the following unused tax loss carryforwards available for offset against future profits:

in kEUR	2025	2024
Corporate income tax	9,946	14,683
Trade tax	10,565	15,464
Total:	**20,511**	**30,147**

Tax loss carryforwards decreased significantly compared with the previous year. This was primarily due to the partial utilisation of tax loss carryforwards and the expiry of tax loss carryforwards as a result of internal restructurings.

in kEUR	2025	2024
Profit before tax from continuing operations	901	6,184
Profit before tax for the period	**901**	**6,184**
Expected income tax expense at 30% (previous year: 30%)	270	1,855
Primarily attributable to: Other tax effects	979	599
Actual income tax expense (effective tax rate: 139%; previous year: 40%)	**1,249**	**2,454**
Income tax expense recognised In profit or loss	1,249	2,454

10. Notes to the Consolidated Statement of Cash Flows

Cash and cash equivalents presented in the consolidated statement of cash flows comprise the balance sheet item cash and cash equivalents, consisting of cash on hand and balances with banks with an original maturity of no more than three months from the date of acquisition.

The consolidated statement of cash flows shows how the cash and cash equivalents of the Nynomic Group changed during the financial year as a result of cash inflows and outflows. In accordance with IAS 7 (Statement of Cash Flows), cash flows in the consolidated statement of cash flows are classified into operating, investing and financing activities.

Changes in balance sheet items considered in the preparation of the consolidated statement of cash flows are adjusted for non-cash effects arising from foreign currency translation and changes in the scope of consolidation.

Operating activities

Cash flows from operating activities are derived indirectly from consolidated profit or loss after taxes. Net income after taxes is adjusted for non-cash expenses and, taking into account changes in working capital, provisions and other operating balance sheet items, results in cash flow from operating activities.

Cash flow from operating activities amounted to kEUR 7,519 in the financial year (previous year: kEUR 7,797). The decrease compared with the previous year was primarily attributable to the significant decline in revenue.

Investing activities

Cash flow from investing activities is determined based on actual cash transactions. It comprises cash flows relating to the acquisition, construction and disposal of intangible assets, property,

plant and equipment, and financial assets that are not part of cash and cash equivalents.

Furthermore, the option under IAS 7.33 to present interest received as part of investing cash flow is exercised.

In the reporting period, cash flow from investing activities amounted to kEUR -2,945. Cash flow from investing activities includes cash transactions relating to new and replacement investments.

Financing activities

Cash flow from financing activities is determined based on actual cash transactions and includes, in addition to the raising and repayment of loans and other financial liabilities, cash flows between the Group and its shareholders.

In accordance with the option provided by IAS 7.33, interest paid is presented as cash flow from financing activities.

During the reporting period, cash flow from financing activities amounted to kEUR -6,094. Cash flow from financing activities primarily resulted from payments for the repayment of loans and lease liabilities.

11. Other disclosures

11.1 Share-based remuneration

Original share option programme

The original share option programme is accounted for at shareholder level and therefore does not give rise to an expense in the statement of profit or loss at the grant date. At the level of Nynomic AG, the exercise of these share option programmes results solely in an increase in equity and cash and cash equivalents.

In 2023, the Management Board was authorised to grant subscription rights to shares in Nynomic AG until June 2028 in accordance with the terms of the 2023 Share Option Plan. As at the end of 2025, the options remained unchanged. Any potential grant of options is reassessed in each reporting period. No targets were achieved in 2025.

Development during the financial year

The following table illustrates the number of share options, their weighted average exercise prices (WAEP), and movements during the financial year:

	2025 Number	2025 WAEP (EUR)
Outstanding at the beginning of the reporting period	**75,000**	**21.68**
Granted during the reporting period	0	0.00
Exercised during the reporting period	0	0.00
Expired during the reporting period	5,000	0.00
Outstanding at the end of the reporting period	**70,000**	**22.76**
Exercisable at the end of the reporting period	70,000	

The weighted average remaining contractual life of the share options outstanding as at 31 December 2025 is approximately 0.5 years. The exercise prices of options outstanding at the end of the reporting period are EUR 14.45 and EUR 23.40.

Virtual share option programme

The payment entitlement against the Company is equal to the difference between the exercise price and the base price applicable to the option, capped at EUR 20 per share. The resulting amount is recognised on a pro rata basis over the four-year vesting period in the provision (kEUR 935; previous year: KEUR 935) at the level of Nynomic AG and recognised as an other liability at Group level. The options are granted in each calendar year following the determination of the individual target achievement of the option holder.

11.2 Guarantees and other commitments

As at the reporting date, no contingent liabilities existed.

11.3 Other financial obligations

There are no significant other financial obligations outside the matters recognised under IFRS 16.

12. Events after the Reporting Date

There were no events of material significance after 31 December 2025.

13. Mandatory and supplementary disclosures under the German Commercial Code (HGB)

13.1 Mandatory Disclosures pursuant to Section 315e HGB and Section 264 (3) HGB

The consolidated financial statements of Nynomic AG have been prepared in accordance with Section 315e HGB and the standards issued by the IASB, with exempting effect from the requirement to prepare consolidated financial statements under the German Commercial Code (HGB). At the same time, the consolidated financial statements and the Group management report comply with the European Union Directive on consolidated financial statements (2013/34/EU). To ensure equivalence with consolidated financial statements prepared in accordance with German commercial law, all disclosures and explanations required under the German Commercial Code (HGB) that go beyond IFRS disclosure requirements are provided.

By virtue of their inclusion in the consolidated financial statements of Nynomic AG, tec5 AG and LayTec AG, as fully consolidated affiliated German companies, have made use of the exemptions provided by Section 264 (3) HGB. Furthermore, Avantes UK Ltd. also makes use of local exemptions analogous to Section 264 (3) HGB by virtue of its inclusion in the consolidated financial statements.

13.2 Number of employees

The average number of employees is broken down as follows:

	2025	2024
Salaried employees	438	471
Industrial employees	96	104
Students / interns	2	4
Trainees	2	4
Total:	**538**	**583**

13.3 Auditor's fees

The fees for services received from the auditor and its affiliated firms and network firms amounted to:

in kEUR	2025	2024
Audit services	175	172
Tax advisory services	82	58
Management consulting services	11	38
Other assurance services	30	38
Total:	**298**	**306**

Fees for audit services relate to the audit of the consolidated financial statements of Nynomic AG and the statutory annual financial statements of the parent company and subsidiaries included in the consolidated financial statements.

13.4 Related party disclosures pursuant to IAS 24

In accordance with IAS 24 "Related Party Disclosures", related parties comprise entities and persons that control the Group or are controlled by it, insofar as they are not already included in the consolidated financial statements as consolidated entities, as well as entities and persons that, by virtue of articles of association or contractual agreements, are able to exercise significant influence over the financial and operating policies of Nynomic AG's management or who participate in the joint management of Nynomic AG. Control exists where a shareholder holds more than half of the voting rights in Nynomic AG.

Members of the Management Board and Supervisory Board are also considered related parties of Nynomic AG. During the reporting period, there were no sup-

ply or service relationships between the Company and the members of either governing body or, where such transactions existed, they were conducted on a limited scale and on terms customary between unrelated parties.

No loans or advances were granted to members of the Management Board or the Supervisory Board during the reporting year.

The following persons were appointed as **members of the Management Board** for the 2025 financial year:

- Mr Fabian Peters, Hamburg
- Mr Maik Müller, Kronberg im Taunus

Members of the Management Board are authorised to represent the Company jointly with another member of the Management Board.

Total remuneration of the Management Board

The disclosure exemption pursuant to Section 314 (3) of the German Commercial Code (HGB) in conjunction with Section 286 (4) of the German Commercial Code (HGB) has been applied.

The following persons were appointed as **members of the Supervisory Board** in the 2025 financial year:

	Occupation
Mr Hans Wörmcke (Chair), Heist	Entrepreneur
Dr Sven Claussen (Deputy Chair of the Supervisory Board), Hamburg	Attorney-at-law at Weiland Rechtsanwälte
Mr Hartmut Harbeck, Wedel	Entrepreneur

Total remuneration of the Supervisory Board

Total remuneration of the Supervisory Board amounted to kEUR 83 (previous year: KEUR 83).

14. Proposed appropriation of net income

In the 2025 financial year, Nynomic AG, as the parent company, reported net income for the year of kEUR 133. The Management Board proposes to offset the net income for the year against the profit carried forward and to carry forward the balance sheet profit.

15. Statement by the Management Board

The present consolidated financial statements as at 31 December 2025 and the Group management report were prepared on 27 March 2026 by the legal representatives of Nynomic AG, who are responsible for the completeness and accuracy of the information contained therein. The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS). The prior-year figures were determined on the basis of the same principles. The consolidated financial statements have been supplemented by a Group management report and additional disclosures required pursuant to Section 315e of the German Commercial Code (HGB).

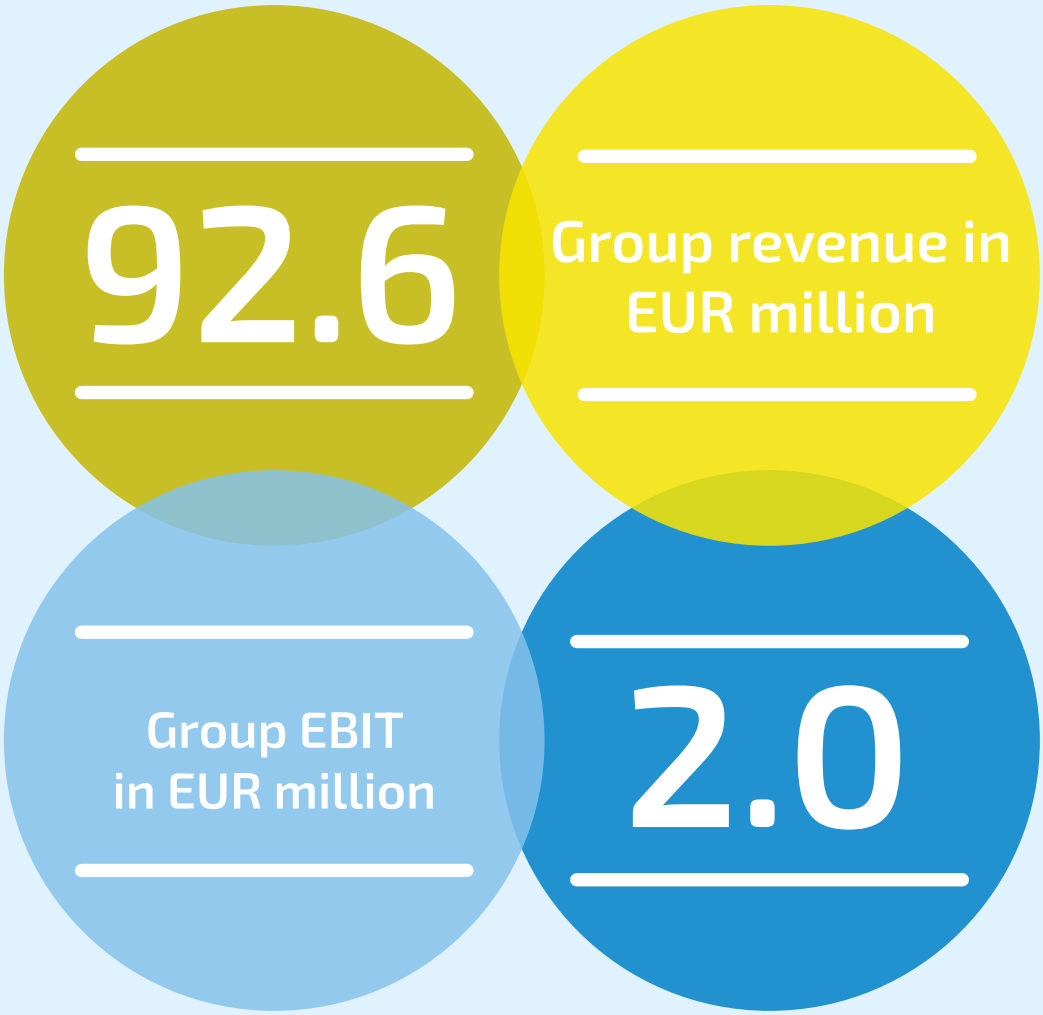

Wedel, 27 March 2026

Fabian Peters

F. Other disclosures

A. Business Activities and Operating Environment

Nynomic AG, headquartered in Wedel, Germany, is the parent company of the Nynomic Group. The Nynomic Group (hereinafter referred to as the "Group" or "Nynomic") comprises the parent company and its subsidiaries. The Group is a leading international manufacturer of products for continuous, non-contact and non-destructive optical measurement technology. The Nynomic Group has a clearly defined marketing concept as a system provider ranging from components to complete devices. Operating globally through independent brands and subsidiaries, the Group employed an average of approximately 538 people during the 2025 financial year and leverages synergies to increase profitability within the Group.

The photonics solutions are based on a comprehensive technology platform for spectral sensor technology and can be flexibly deployed across a wide range of applications. Their high degree of adaptability to customer-specific processes makes a significant contribution to improving efficiency and creating added value for customers. Integration into customers' value chains further enhances these benefits. From customer-specific solutions to series products, development efforts are tailored precisely to individual customer requirements. With a view to sustainable development in industrial processes, the Nynomic Group supports its customers with innovative technological solutions that enable energy-efficient, resource-conserving and environmentally friendly processes.

Products manufactured by the Nynomic Group are marketed either under its own name or under the customer's label. The Nynomic Group focuses on future-oriented segments such as Green Tech (agriculture and environmental technology), Clean Tech (applications across the industrial sector) and Life Science (laboratory automation and medical technology). Demographic developments, climate change, increasing scarcity of resources and the trend towards sustainability, together with the resulting increase in regulatory requirements, are expected to contribute to stabilising demand and generating growth momentum. The Nynomic Group's new production technologies can both reduce unit costs and promote the miniaturisation of products, thereby enabling innovative applications that may replace conventional solutions and create new opportunities.

There are numerous small and medium-sized providers in the field of measurement and sensor technology, ranging from manufacturers and resellers to engineering firms and specialised service providers. Nynomic pursues a business model aimed at differentiating itself from other providers through customer-oriented integrated technological solutions and the continuous development of its portfolio along the value chain of non-contact optical measurement technology.

As of 31.12.2025, the Group held shareholdings in companies operating in the fields of optical technology, medical device technology, sensor technology, control technology and related areas. These include the m-u-t Group (Wedel/Germany), the Avantes Group (Apeldoorn/The Netherlands), the tec5 Group (Steinbach/Germany), the LayTec Group (Berlin/Germany), LemnaTec GmbH (Aachen/Germany), Sensortherm GmbH (Steinbach/Germany), the Image Engineering Group (Kerpen/Germany), MGG Micro-Glühlampen-Gesellschaft Menzel GmbH (Wentorf/Germany), NLIR ApS (Farum/Denmark) and art photonics GmbH (Berlin/Germany). During the 2025 financial year, the two intra-Group mergers involving Spectral Engines GmbH and APOS GmbH into m-u-t GmbH were completed in order to further streamline the Group struc-

ture and consolidate the Group's operating units. As of the reporting date, Nynomic AG therefore held direct or indirect interests in 25 companies.

The operating subsidiaries have the following areas of focus:

m-u-t GmbH

m-u-t GmbH, Wedel, is an established provider of standard products and solutions for technologically demanding markets. It provides customised system solutions for measurement and control challenges in the fields of control technology, sensor technology, laboratory automation and spectrometry. The company's core competencies include the development and manufacture of products for continuous, non-contact and non-destructive optical measurement technology. During the 2025 financial year, the intra-Group mergers of Spectral Engines GmbH and APOS GmbH into m-u-t GmbH were completed as planned. The objective of the integration is to standardise processes, realise synergies and sustainably enhance operational efficiency.

tec5 AG

The tec5 AG and its subsidiaries, which have been part of the Nynomic Group since 2007, are an established provider of components and systems for industrial optical spectroscopy (UV–VIS–NIR and Raman diode-array spectroscopy, including the associated software solutions) serving global markets. The tec5 AG develops and manufactures sophisticated, easy-to-integrate optical measurement systems designed for process applications across a wide range of industries.

Avantes Holding B.V.

Avantes Holding B.V., Apeldoorn, and its subsidiaries were integrated into the Group in 2008. The company specialises in the development and production of spectroscopy equipment for OEM applications and the scientific market. It develops and manufactures spectrometers, UV, VIS and NIR light sources, fibre-optic components and optical waveguides, accessories and customised solutions. Avantes products are used, among other things, in the biomedical sector, agriculture, the chemical and food industries, inline process control, as well as radiometry and thin-film analysis.

LayTec AG

In 2017, Nynomic AG acquired LayTec AG, an internationally active company specialising in in-process metrology solutions. LayTec products are primarily used for in-situ process control in the manufacture of light-emitting diodes and semiconductor lasers, as well as for monitoring solar-cell manufacturing processes through optical inline metrology and enabling real-time analysis in the research and development of novel thin-film materials. In-situ measurement technology for LED and VCSEL epitaxy complements LayTec's product portfolio.

LemnaTec GmbH

In 2019, 100% of LemnaTec GmbH, Aachen, was acquired. The company has established itself as a specialist in hardware and software systems for digital plant phenotyping and high-throughput screening. LemnaTec's plant phenotyping solutions are primarily used in agrochemicals, agricultural and plant research, and plant breeding. In 2025, LemnaTec acquired key business operations of SpexAI GmbH, thereby strengthening its expertise, particularly in the future-oriented field of artificial intelligence.

Sensortherm GmbH

In 2019, 100% of Sensortherm GmbH, Steinbach, was acquired. Sensortherm GmbH develops, manufactures and markets intelligent infrared measurement technology. This enables very high measurement speeds and signal outputs (response times) to be achieved with the highest level of accuracy. Sensortherm has many years of experience in digital pyrometry and offers cost-effective, high-quality technical solutions for a wide range of applications.

Image Engineering GmbH & Co. KG

In 2021, a 51% stake in Image Engineering GmbH & Co. KG, Kerpen, was acquired. Image Engineering specialises in the development and manufacture of test and

calibration equipment for cameras and multi-sensor systems. From the management's perspective, its many years of expertise in the field of image quality measurement provide an important foundation for optimally serving the growing demand for multi-sensor calibration systems in areas such as automotive, security and medical technology in the future. The acquisition has provided the Nynomic Group with access to the high-growth market for calibration technology for multi-sensor systems, with applications across a wide range of industries.

MGG Micro-Glühlampen-Gesellschaft Menzel GmbH

In 2021, MGG Micro-Glühlampen-Gesellschaft Menzel GmbH, Wentorf bei Hamburg, was acquired in full. MGG GmbH is a renowned manufacturer of miniature incandescent lamps, which are important components in almost all areas of modern electrical engineering and electronics and are used primarily in optical measurement technology as well as in safety and medical technology applications. In addition to its standard products, MGG develops and manufactures lenses and specialised lamps in accordance with customer-specific requirements. The expansion of the technology portfolio is intended to further increase the Nynomic Group's level of vertical integration.

NLIR ApS

In 2023, approximately 31% of NLIR ApS, Farum, was acquired. NLIR is based on a novel, patented upconversion technology. At the core of this technology is a nonlinear crystal that converts light in the mid-infrared range into near-visible light. With its exceptionally high acquisition speed and sensitivity, this technology enables mid-infrared measurement systems to be scaled from the laboratory into industrial process environments for the first time. With the potential to enable additional process applications that have not previously been feasible, the acquisition makes an important contribution to expanding the Nynomic Group's technology portfolio.

art photonics GmbH

With economic effect from 1 January 2024, Nynomic AG acquired 100% of the shares in art photonics GmbH, Berlin. art photonics operates worldwide in the development and manufacture of specialty fibres for optical measurement technology. Its leading expertise in polycrystalline mid-infrared (PIR) fibres and metal-coated silica fibres is used to develop a range of spectroscopy probes for applications such as medical diagnostics and industrial process control. In addition, these technologies are used in a wide range of medical and industrial laser applications.

Photecture Inc.

Photecture Inc., Plainview, which was established in 2023, was discontinued during the 2025 financial year. This was primarily due to changing economic conditions in the US market, under which the business model could no longer achieve sustainable profitability.

Nynomic has a global presence through its investments, customers and distributors and is active in the key technology markets of Europe, North America and China.

B. Business performance, including the Group's assets, financial position and results of operations

The Board of Directors has defined revenue (in accordance with Section 277 of the German Commercial Code (HGB)) and EBIT (earnings before interest and taxes) as the Group's key financial performance indicators.

Revenue development

After several years of dynamic growth, the Group recorded a decline in revenue for the second consecutive year in the 2025 financial year. In a market environment that remained challenging, Group revenue amounted to EUR 92.6 million in the 2025 financial year (previous year: EUR 102.4 million; -10%), and was therefore close to the revised annual forecast issued in November 2025 (EUR 93.0 million to EUR 96.0 million). During the financial year, the revenue forecast of EUR 105.0 million to EUR 110.0 million presented in the management report was revised twice and reduced

to the final target range due to restrained purchasing behaviour by certain key customers. In the Board of Directors' assessment, the market environment in the 2025 financial year was adversely affected in particular by geopolitical uncertainties, weaker industrial demand, delayed investment decisions and the US tariffs introduced during the year. In addition, customers continued to maintain high inventory levels, resulting in delays in product orders and projects.

The Nynomic Group's revenue changed by EUR -9.8 million, or -10%, to EUR 92.6 million and was therefore below the industry trend (+2%; see the 2025 industry statistics of the AMA Association for Sensors and Measurement). The deviation from the industry trend was primarily attributable to the restrained purchasing behaviour of certain key customers.

The Nynomic Group's operating business is broadly diversified in terms of products and is divided into the three segments Clean Tech, Life Science and Green Tech. The long-term market growth drivers remain intact; nevertheless, each of the three segments faced specific temporary challenges in 2025. This was particularly evident in the Clean Tech segment, which recorded a decline in revenue of approximately 13%. The main reasons for this were weak demand in industrial end markets, restrained investment activity by OEM customers and continued inventory reduction in the semiconductor sector. Nevertheless, Clean Tech remains the dominant segment and is expected to continue to do so in the future, supported by a broad base of OEM customers and industrial applications.

The regional distribution remained largely unchanged and underscores the strategic importance of these markets. International revenue accounted for approximately 43% of Group revenue (previous year: 41%), remaining below the industry average of 50% (according to AMA Verband für Sensorik und Messtechnik e.V. (AMA Association for Sensors and Measurement)).

As in previous years, the 2025 financial year was also characterised by significant revenue volatility during the year. Following a subdued first quarter, demand for the Group's products and solutions remained weak in the second quarter, resulting in first-half Group revenue remaining below the prior-year level. Revenue in the third quarter exceeded the levels of the two preceding quarters, indicating a positive trend over the course of the year. At the same time, the order backlog increased noticeably and was significantly higher than in the previous quarter. Business activity showed further improvement in the fourth quarter. Although the expected strong fourth quarter was unable to fully offset the subdued performance of the earlier quarters, it provides positive momentum for the 2026 financial year.

Earnings performance

The Nynomic Group generated EBIT of EUR 2.0 million in the 2025 financial year (previous year: EUR 7.4 million; -73%), thus matching the adjusted forecast of EUR 2.0 million. The forecast communicated at the beginning of the year—EBIT of between EUR 8.5 million and EUR 10.0 million—could not be achieved. In the reporting year, operating earnings were impacted, among other factors, by planned restructuring expenses incurred as part of the Group-wide NyFIT2025 efficiency and optimisation programme. These expenses are included in the reported EBIT. The programme is aimed at sustainably strengthening earning capacity and optimising cost structures. In addition to these one-off effects, earnings performance was adversely affected in particular by reduced economies of scale resulting from temporary declines in revenue and by the postponement of high-margin projects. The temporary burdens arising from the implementation of the efficiency programme in the 2025 financial year are expected to generate positive earnings effects from the 2026 financial year onwards and thereby contribute to improved operating profitability. Investments in the technology portfolio, research and development, and ongoing projects were consistently maintained. Despite a decrease in gross profit[1] of EUR 6.8 million to EUR 60.3 million, profit before taxes of EUR 0.9 million was achieved. After taking into account income tax expense of EUR 1.2 million, the financial

year for the continuing operations ended with consolidated net income of EUR -0.3 million, representing a decrease of EUR -4.0 million (previous year: EUR 3.7 million),

The quarterly development of EBIT in the 2025 financial year reflects the continued intra-year volatility observed in previous years and highlights the effects of NyFIT2025 as well as revenue-dependent economies of scale. The first half of the year was characterised by relatively weak earnings performance. In the third quarter, Group EBIT returned to positive territory for the first time during the year. This positive trend continued in the fourth quarter: EBIT improved significantly and reflected the first positive effects of the Group-wide NyFIT2025 efficiency and optimisation programme. Although the programme implemented throughout the year temporarily weighed on margins, it provides a foundation for sustainable efficiency gains and structural cost savings. In a challenging market environment, several Group companies generated positive EBIT contributions. The Avantes Group proved to be by far the strongest driver of earnings, followed by MGG GmbH, which also made a significant contribution to the Group's earnings. The tec5 Group and the Image Engineering Group also made earnings-enhancing contributions at the EBIT level, thereby supporting the stability of the Group. Challenges were encountered at art photonics GmbH, Sensortherm GmbH, the LayTec Group and LemnaTec GmbH, none of which generated a positive EBIT contribution to the Group's earnings in the 2025 financial year. The same applies to the m-u-t Group, whose earnings performance in the reporting year was adversely affected by restructuring effects resulting from intra-Group mergers.

Investments

In the financial year under review, investments in fixed assets amounting to EUR 7.0 million were made. Additions were primarily attributable to right-of-use assets under IFRS 16 as a result of lease extensions, as well as ongoing replacement investments in property, plant and equipment.

Financing

The various investment measures were financed through a combination of internal and external funding. To finance its investments, the Board of Directors of Nynomic AG relies on both bank loans and internal financing. As at 31 December 2025, there was no net indebtedness to banks (cash and cash equivalents less liabilities to banks).

Financing is provided primarily through framework agreements in the form of loans and overdraft facilities with availability periods extending until 2026.

Personnel development

The average number of employees decreased to approximately 538 (previous year: approximately 583). Personnel expenses therefore decreased by EUR 1.5 million year on year to EUR 41.2 million, primarily as a result of the Group-wide NyFIT2025 efficiency and optimisation programme implemented in 2025.

Assets

As at 31 December 2025, the Company's total assets had decreased by -4% compared with the previous year. The decrease in total assets was driven primarily by the reduced level of operating activity and the resulting decline in inventories and trade receivables. In addition, liabilities to banks were reduced as planned.

The asset structure is characterised by a share of non-current assets in total assets of 54% (previous year: 51%). Inventories accounted for 21% (previous year: 22%) of total assets. Receivables and other assets accounted for 12% of total assets at the end of the 2025 financial year (previous year: 13%). Cash and cash equivalents accounted for 11% (previous year: 12%) of total assets.

The capital structure is characterised by an equity ratio of 75% (previous year: 74%).

The liquidity position remained strong during the financial year. As at the reporting date, cash and cash

[1]Gross profit = Overall performance (Revenue +/- changes in inventories + other own work capitalised)
less cost of raw materials, consumables and supplies and merchandise
less cost of purchased services

equivalents amounted to EUR 14.5 million (previous year: EUR 16.3 million). In addition, sufficient overdraft facilities remain available for short-term financing. The debt ratio (liabilities / equity × 100%) amounted to 33% in 2025 (previous year: 35%).

Order backlog

A net order backlog of EUR 45.0 million was carried forward into the 2026 financial year (previous year: EUR 47.5 million). The m-u-t Group and the tec5 Group account for the largest share of the order backlog, amounting to a total of EUR 31.3 million. The order backlog extends across all segments and underscores the Group's strategically robust positioning.

Investor relations and share price performance

Within Deutsche Börse AG's Scale segment for high-growth small and medium-sized enterprises (SMEs), the Nynomic share is included in the Scale 30 selection index. On a voluntary basis, the Company exceeds the communication and transparency requirements of the Scale segment. In addition to the mandatory reporting requirements in the form of a half-year report and an annual report for the financial year as a whole, the Company also publishes key financial indicators for the first and third quarters of the financial year. In 2025, the Board of Directors carried out a wide range of investor relations activities. These included, among other things, participation in analyst and investor conferences. In addition, two earnings calls were held during the reporting year—on the publication of the preliminary results for the 2024 financial year and for the first half of 2025 - and shareholder letters, corporate news and presentations were published. These measures were intended to further strengthen investor confidence and ensure open, transparent communication regarding the Group's business performance and strategic positioning.

As in the previous year, the Scale30 Performance Index moved sideways during the 2025 stock market year and therefore significantly underperformed the positive performance of the DAX. As a company listed in the Scale segment, the Nynomic share was likewise affected by the continued weakness in the small-cap market environment and recorded a negative share price performance during the year.

C. Sustainability objectives

Sustainability strategy (sustainability approach and objectives)

In this report, Nynomic voluntarily documents its environmental and social performance as well as the progress achieved in implementing its sustainability objectives during the 2025 reporting year. The report is intended to demonstrate to our stakeholders how environmental and social objectives and measures have contributed to the Company's success. This non-financial reporting complements the financial reporting contained in this management report, providing a holistic presentation of our strategy and objectives. With this report, we aim to provide our stakeholders with insights into the non-financial aspects and key performance indicators of our business activities.

As at 31 December 2025, Nynomic operated at several locations, including production facilities and research and development sites in Apeldoorn (the Netherlands) and in Steinbach im Taunus, Wedel, Berlin, Aachen, Wentorf and Kerpen (Germany). In addition, the Company maintains sales and service locations in the United States and Asia. The majority of our employees work at our locations in the Netherlands and Germany. Accordingly, the focus of this report is on these two regions.

Governance (ESG governance structure, risk management, materiality analysis)

As part of its sustainability reporting, the Company assesses topics with regard to their "double materiality". Double materiality requires disclosures on non-financial aspects where the following criteria are met:

1. The disclosures are necessary to understand the Company's business performance, earnings

performance and position.
2. The disclosures make it possible to understand how the Company's business activities affect non-financial aspects.

We assessed the identified topics against this principle of double materiality. These topics are covered in the respective chapters of this report. No "material risks" were identified in relation to our own business activities, business relationships, products or services that have or are likely to have "highly probable severe adverse impacts".

The sustainability performance of the Nynomic Group was externally audited for the first time in 2022 and was rated "very good" in the most recent rating process conducted in 2023.

To identify the material non-financial topics for the 2025 reporting year, a materiality assessment was conducted once again and the economic, environmental and social topics relevant to us were evaluated. This analysis serves to systematically assess Nynomic's impact on the environment and society while simultaneously identifying the resulting risks and opportunities for the Company. No new material topics were identified; accordingly, the results are consistent with those of the previous year.

The analysis focused on aspects that have a material impact on the Company. For this purpose, internal subject-matter experts and employees who are in continuous dialogue with our stakeholders were consulted. These internal surveys, based on the expertise and many years of experience of our employees, also enabled us to incorporate an external perspective.

The Board of Directors of Nynomic AG bears overall responsibility for sustainability and makes decisions on material sustainability matters. Responsibility for implementing the objectives and projects approved by the Board of Directors rests with the respective local management teams. The Board of Directors and the managing directors of the subsidiaries are advised by a Group-wide ESG team that brings together expertise from various areas, including innovation, sustainable products, customer responsibility, compliance, transparency and governance.

Environment

We regard environmental protection as an important aspect of sustainability. Through our innovative photonic technologies and products, we aim to contribute to the protection of the environment and natural resources while delivering efficiency and high performance to our customers worldwide.

The Group implements various measures in the areas of environmental management and operational environmental protection. A sustainable energy policy is not only an expression of our corporate responsibility but also contributes to resource conservation, compliance with legal requirements and the long-term safeguarding of our future.

The key performance indicator "electricity consumption" is used to monitor energy efficiency, identify cost-saving potential and ensure compliance with environmental requirements. It records the electricity required for the Nynomic Group's operations and measures electricity consumption relative to the average number of employees. In 2025, energy consumption amounted to approximately 1,900 kWh per employee (previous year: approximately 1,800 kWh). This figure was determined across the European subsidiaries and indicates an overall stable development compared with the previous year. The slight increase is attributable to the lower average number of employees, which resulted in a mathematical increase in per-capita energy consumption. Our objective of reducing this figure continued to be pursued, even though no further reduction was achieved during the reporting period. We will continue to consistently pursue measures aimed at improving energy efficiency.

The regular monitoring of and transparent reporting on our electricity consumption are integral components of our commitment to sustainability and environmental

protection. We seek to achieve improvements by promoting more energy-efficient technologies and evaluating the use of renewable energy sources. We also promote employee training in efficient energy use and energy-saving best practices.

Employees

Our strong market position is based primarily on the extensive know-how and expertise of our dedicated employees, who develop highly innovative technologies. Motivated and satisfied employees who are able to realise their full potential are therefore a key success factor for us. At Nynomic, all employees have equal development opportunities regardless of gender, origin, religion, physical disabilities, marital status, age or sexual orientation. Through training and professional development programmes, support for young talent, modern and flexible working conditions, and a safe and healthy working environment, the Group positions itself as an attractive employer.

Employee satisfaction serves as an indicator of social aspects in the ESG context and is incorporated into the assessment of corporate responsibility. Continuous professional development can support this satisfaction by creating opportunities for personal and professional growth and helping employees realise their individual potential. The key performance indicator "training days per employee" provides measurable results for assessing the social aspects of corporate responsibility. In 2025, the average number of training days per employee amounted to 3.3 days (previous year: 1.8 days). The significant increase is attributable in particular to additional training measures related to the introduction of a new ERP system at a subsidiary and to increased training requirements resulting from intra-Group mergers. At the same time, the number of training days reflects the high priority we place on the continuous development of our employees. Our objective remains to achieve at least two training days per employee per year over the long term, thereby ensuring continuous and needs-based professional development. To achieve this objective, Nynomic pursues a comprehensive approach to employee development. Through regular training courses, practical training sessions and a wide range of learning opportunities, we aim to strengthen expertise and competencies. In addition, we offer clear career paths and individual development plans to provide our employees with optimal prospects for their professional future.

Employee health is also an important aspect and contributes significantly to long-term performance and competitiveness. The key performance indicator "number of occupational accidents" provides important insights into workplace safety. In 2025, the rounded average number of occupational accidents across the Group was 0 (previous year: 0). Our goal is to maintain this level and, ideally, to sustainably achieve 0 occupational accidents. A low accident rate indicates a high level of safety and an effective occupational health and safety culture. To further improve workplace safety and achieve our goal of a working environment with as few accidents as possible, we rely on regular training to promote safety awareness, preventive measures based on risk assessments, and the continuous review and optimisation of our processes. These measures support our efforts to sustainably improve workplace safety and protect the health of our employees over the long term.

Governance

For Nynomic, good corporate governance means not only compliance with legal and regulatory requirements but also adherence across the Group to other key ethical and moral standards and principles.

Our objective is to foster a strong compliance-oriented corporate culture and to identify potential violations at an early stage. In doing so, we help strengthen Nynomic's reputation and the trust placed in the Company, minimise legal risks, and promote employee satisfaction and motivation. At the same time, this enhances our attractiveness to customers and investors. Regular audits and mandatory training for all employees ensure that compliance remains a permanent and firmly embedded part of the organisa-

tion. Additional measures include the regular review and updating of internal compliance policies, the promotion of an ethical and open communication culture, and the implementation of an anonymous digital reporting system that enables employees to confidentially report misconduct.

Transparency and systematic, comparable reporting are of great importance to Nynomic. Together with our stakeholders, we are part of society and value these relationships as important partnerships. This also includes providing the entire workforce with regular and transparent information. Through the Nynomic employee newsletter, the Board of Directors informs employees worldwide about topics such as business and market developments, customer wins and internal Company news. Relevant information is also published promptly on our corporate website and through appropriate media channels in order to keep other stakeholders informed. We explain how strategic decisions are made, which objectives we pursue and which measures are taken to achieve them. This transparent presentation of the Company's strategy, governance structures and business processes is intended to provide stakeholders with a well-founded understanding of the Company's long-term direction and performance, thereby creating a solid basis for trust in our business practices.

The Nynomic Group's sustainability-related approach is geared towards continuous development based on the identified material topics and continuously incorporates relevant environmental, social and governance aspects into its strategic management and planning.

As these matters were not considered material, the Board of Directors did not implement any separate measures within the meaning of Section 289c (2) Nos. 4 and 5 of the German Commercial Code (HGB).

D. Opportunity and risk report

For an internationally active group of companies, there are numerous business risks and opportunities that may influence business performance on an ongoing basis. The assessment of risks and opportunities, as well as the deliberate management of entrepreneurial uncertainty, is of material importance.

The objectives and methods of risk management are tailored to the size of the Company, its flat organisational structure, number of employees and field of activity. Nynomic AG has extensive planning and controlling instruments at its disposal. These support the Board of Directors in identifying business risks at an early stage and taking effective countermeasures. The risk management system also identifies and monitors opportunities and risks that are required to be reported as part of the management report.

As a result, risks are analysed at defined intervals and material changes in the risk profile are reported to the Board of Directors. The elements of the risk management system include risk management, risk controlling and risk reporting.

Risks:

The business policy and operations of Nynomic AG are associated with a considerable financing requirement, which may lead to temporary liquidity shortages if cash flow is insufficient. Financial management encompasses liquidity management as well as the management of currency, interest rate, credit and country risks. Financial risks arise in particular from potential liquidity shortages resulting from fluctuations in cash flows and changing market conditions.

To manage these risks, the Company employs forward-looking liquidity planning, continuous monitoring of contractual financial covenants and diversification of financing sources. Currency and interest rate risks may, where necessary, be hedged using appropriate hedging instruments. In the opinion of the Board of Directors, these risks are currently manageable.

Sales and market risks arise in particular from dependence on individual key customers and from potential declines in demand resulting from overall economic

developments. Changes in procurement strategies or delays in customer projects may lead to fluctuations in revenue. The Nynomic Group continuously monitors market trends and addresses these risks, among other measures, through the expansion of its customer base, the further development of its product portfolio and the diversification of its sales structures. The Board of Directors currently continues to assess these risks, particularly dependence on individual customers, as very high; however, it considers them to be adequately addressed by the measures implemented.

Personnel risks relate primarily to challenges in recruiting and retaining qualified specialists, as well as to potential vacancies in key positions. Such developments may adversely affect innovative capacity and efficiency. The Nynomic Group addresses these risks through targeted recruitment measures, training and professional development programmes, as well as flexible working and remuneration models. Health and safety measures support the reduction of work-related health risks. The likelihood of occurrence is considered moderate.

Procurement and supplier risks may arise from dependence on individual suppliers and disruptions in global supply chains. Delays or failures in supply may result in increased costs or production delays. Within the Nynomic Group, these risks are mitigated through the use of Group-wide synergies, the targeted development of alternative sources of supply, close and cooperative relationships with suppliers, and continuous market and risk monitoring. In the opinion of the Board of Directors, these risks are currently being managed effectively and are therefore of limited impact.

IT and cyber risks arise from potential attacks on IT infrastructure, data loss and impairment of system availability. The Group employs technical security measures, access controls, regular system reviews and appropriate organisational processes to limit these risks. The likelihood of occurrence is considered manageable.

Legal and compliance risks may arise from changes in legal and regulatory requirements. Due to the international orientation of the Nynomic Group, changes in customs regulations or increases in import duties may affect both procurement processes and the export of the Group's own products, thereby influencing supply chains, sales opportunities and cost structures. To limit such risks, relevant developments in trade and customs law are continuously monitored, customs-related processes are optimised, and alternative sourcing, production and delivery routes are evaluated. In addition, established compliance processes are applied, employees receive training, and external expertise is consulted where necessary. As a result, the Board of Directors currently considers these risks to be adequately mitigated by the measures in place.

Sustainability-related risks may affect various areas of the Group. These include risks associated with climate change, resource depletion, environmental pollution, governance-related developments, and changes in environmental and occupational health and safety regulations. These factors may result in reputational damage, legal issues and financial losses. The Board of Directors currently considers the likelihood of occurrence to be low, as the existing measures implemented under the sustainability strategy are designed to address environmental, social and economic challenges. These measures are described in detail in the sustainability objectives report above, which forms part of the non-financial reporting.

Despite the continued challenging macroeconomic and geopolitical environment, the Board of Directors currently sees no material changes in the overall risk position. Based on current knowledge, the identified risks are manageable overall, and there are currently no indications of risks that could threaten the Company's ability to continue as a going concern.

Opportunities:

In the opinion of the Board of Directors, the Nynomic Group's opportunities lie primarily in the operating business of its Group companies. Potential to further

expand business volume across all segments arises both from changing legal and regulatory conditions and from new business relationships with leading OEM customers. The Nynomic Group focuses on three high-growth future markets—Life Science, Green Tech and Clean Tech—with a broad spectrum of applications. Its diversified technology and product portfolio enables the Group to address these markets with a variety of solutions and meet a wide range of customer requirements. Increasing requirements for process quality, resource efficiency and sustainability across various industries further reinforce this trend.

The Board of Directors sees the direct integration of subsidiaries into the Nynomic Group structure as a driver of growth. This creates opportunities for faster and more direct access to innovative technologies, which could enhance the development potential of the individual companies. At the same time, the Group's technological leadership can be strengthened, internal synergies can be utilised more effectively, and capabilities in dynamically growing markets can be expanded in a targeted manner.

Additional opportunities arise from the Group's international presence, which facilitates access to high-growth technology and industrial markets and may open up new customer segments. Regional diversification also enables the Nynomic Group to benefit from differing market dynamics and capture growth opportunities across multiple regions.

The continuation of the buy-and-build strategy through targeted acquisitions in future-oriented technology fields is regarded as a key opportunity to generate sustainable growth momentum and further strengthen the Nynomic Group's market position. In the opinion of the Board of Directors, future acquisitions are expected to contribute to the Group's further positive development through the pooling of market knowledge and technological expertise, as well as the efficient use of resources. In addition, the scalable transferability of existing sensor and spectroscopy platforms to new applications and process steps offers further growth potential. Strengthening customer-centric value chains also supports the positioning of the Nynomic Group as an international provider of innovative spectroscopic solutions, thereby sustainably enhancing competitiveness and customer loyalty in the global market environment.

Additional growth potential arises from global trends such as artificial intelligence, digitalisation and demographic change, which are accompanied by increasingly scarce resources and the resulting need for greater efficiency. As a future-oriented technology company, efficient and resource-efficient operations are an important aspect for Nynomic. The potential of photonic technologies to contribute to environmental sustainability across numerous fields of application is highly promising. Through the use of innovative technological solutions and processes, non-destructive measurement technology is becoming more powerful and resource-efficient, enabling improvements in the efficiency and sustainability of a wide range of end products. This includes applications in areas such as environmental measurement technology and industrial measurement technology (process measurement technology), which support reductions in resource consumption throughout the entire value chain. As a result, the Nynomic Group's solutions and products can help reduce not only its own environmental footprint but also that of its customers and, ultimately, that of end users in these fields.

In addition, data-driven applications—such as cloud-based analytics and AI-based automated analyses—are creating new opportunities for future-oriented solutions in the field of optical measurement technology. The Board of Directors sees significant future opportunities in areas such as environmental and energy management, the provision of innovative solutions for molecular diagnostics and point-of-care systems, and the development of smart, decentralised sensor technology. This also includes the fields of Industry 4.0 and miniaturisation. The Nynomic Group's ability to integrate advanced technologies directly into machinery, equipment and end devices

could help it realise competitive advantages in these high-growth sectors.

As a key technology, photonics opens up a wide range of growth opportunities for the Nynomic Group across all of these areas. The ability to measure and process light with a high degree of precision supports innovative, resource-efficient solutions specifically designed to address the growing demand for sustainable production and quality assuranceprocesses.

E. Forecast report

In the opinion of the Board of Directors, key growth drivers will continue to include digitalisation and the increasing use of artificial intelligence. The Nynomic Group also expects stricter regulatory requirements, particularly in the areas of product safety, quality assurance and environmental standards, to have a positive impact on demand for precise and reliable measurement and sensor technology. Based on Nynomic's core expertise in process-integrated online measurement technology, this continuously creates new market potential and fields of application in the areas of Clean Tech, Green Tech and Life Science.

In the opinion of the Board of Directors, there are currently no signs of saturation in the Group's addressable market segments. The Board of Directors continues to see promising technology partnerships and development projects with potential for future growth across all three segments. The Group's broad, cross-industry international network enables it to win new leading OEM customers with demanding measurement and sensor technology projects. At the same time, the stable business relationships with existing OEM customers enable the further development of products and solutions and the realisation of additional improvement potential. The objective remains to identify promising projects from a broad range of development initiatives and, together with the respective OEM customers, continuously develop them into scalable and profitable products in both the short and medium term.

The primary focus remains on the European and North American markets in order to drive and accelerate sustainable growth, and this will continue to be a strategic priority in the future.

Nynomic considers itself well positioned to benefit from these growth opportunities. Acquisitions and equity investments continue to be regarded as suitable instruments for achieving the Company's strategic objectives. The Board of Directors is therefore confident that the Nynomic Group will continue to expand its technology portfolio through targeted, future-oriented acquisitions and further strengthen its market position.

The Company considers the remaining uncertainty factors to include demand behaviour shaped by the persistently weak economic environment and ongoing geopolitical conflicts. However, the Board of Directors believes that the Group's diversified business model and international presence will continue to help mitigate the effects of geopolitical and macroeconomic risks. Thanks to its broad supplier network, supply chains are expected to remain manageable and well coordinated.

During the reporting year, Nynomic's strategic focus was on the NyFIT2025 optimisation programme, which includes measures aimed at cost optimisation, efficiency improvements and streamlining the Group structure and is intended to sustainably improve Group margins in the coming years. Two successful intra-Group mergers enabled the consolidation of operating units, the realisation of synergies and the strengthening of organisational capabilities. The associated restructuring expenses were incurred predominantly in the 2025 financial year. The measures implemented as part of NyFIT2025 form the foundation for sustainable improvements in efficiency, profitability and competitiveness. The resulting cost savings are expected to become effective from the 2026 financial year onwards. A stabilising economy and increasing investment activity in the Group's core markets are also expected to support earnings performance

in 2026. In addition, based on current expectations, the postponement of individual projects from 2025 to 2026 is expected to contribute positively to revenue and earnings development.

Overall, the Board of Directors expects an improvement in operating performance and, despite macroeconomic conditions that remain difficult to forecast, remains cautiously but confidently optimistic about future business development. In line with these expectations, the Group-wide business plan provides for growth in both revenue and earnings compared with 2025.

Against a market environment still heavily influenced by economic uncertainty and geopolitical tensions, the members of the Board of Directors of the Nynomic Group, Maik Müller and Fabian Peters, currently expect Group revenue for the 2026 financial year to be between EUR 100.0 million and EUR 105.0 million, together with an EBIT margin of between 6% and 8%. Revenue development during the year is expected to remain volatile. As part of its sustainability objectives, the Nynomic Group aims to reduce electricity consumption in its operations relative to the average number of employees, achieve an average of at least two training days per employee per year over the long term, and to keep the average number of workplace accidents at 0 wherever possible.

The Board of Directors assumes that the measures already initiated are suitable for achieving a sustainable improvement in earnings. Should further measures prove necessary in the future, they will continue to be implemented consistently. However, the extent to which unforeseen events resulting from geopolitical developments may affect business performance during the remainder of the year cannot currently be fully assessed, including by the Nynomic Group.

In the medium term, the Nynomic Group believes it is strategically well positioned to grow faster than the market. Acquisitions and equity investments will remain key instruments of the Group's strategic development. As part of its medium-term financial planning through 2030, Nynomic AG expects continued growth in revenue and earnings together with stable double-digit EBIT margins.

F. Other disclosures

Research and development

Research activities are generally carried out in cooperation with external partners. In addition, specific product development activities are carried out, with the related costs recognised as expenses as incurred. In 2025, research and development expenses within the segments of the Nynomic Group amounted to EUR 10.1 million. This underscores the Group's positioning as a leading developer of series products and solutions in a technologically demanding market.

Independent auditor's report

The following independent auditor's report was issued on 23. April 2026 for the complete consolidated financial statements as at 31. December 2025 and the Group management report for the 2025 financial year of Nynomic AG:

To Nynomic AG, Wedel

AUDIT OPINION

We have audited the consolidated financial statements of Nynomic AG, Wedel, and its subsidiaries (the Group), which comprise the consolidated balance sheet as at 31 December 2025, the consolidated statement of comprehensive income, the consolidated statement of changes in equity and the consolidated cash flow statement for the financial year from 1 January 2025 to 31 December 2025, as well as the notes to the consolidated financial statements, including material accounting policy information. In addition, we have audited the Group management report of Nynomic AG, Wedel, for the financial year from 1 January 2025 to 31 December 2025.

In our opinion, based on the knowledge obtained in the audit:

- the accompanying consolidated financial statements comply, in all material respects, with the IFRS Accounting Standards issued by the International Accounting Standards Board (hereinafter referred to as "IFRS Accounting Standards"), as adopted by the EU, and the additional requirements of German law pursuant to Section 315e (1) of the German Commercial Code (HGB), and, in compliance with these requirements, give a true and fair view of the net assets and financial position of the Group as at 31 December 2025 and of its results of operations for the financial year from 1 January 2025 to 31 December 2025; and

- the accompanying Group management report as a whole provides an appropriate view of the Group's position. In all material respects, this Group management report is consistent with the consolidated financial statements, complies with German legal requirements and appropriately presents the opportunities and risks of future development.

Pursuant to Section 322 (3) sentence 1 of the German Commercial Code (HGB), we declare that our audit has not led to any reservations concerning the propriety of the consolidated financial statements and the Group management report.

BASIS FOR THE AUDIT OPINIONS

We conducted our audit of the consolidated financial statements and the Group management report in accordance with Section 317 of the German Commercial Code (HGB) and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institute of Public Auditors in Germany (IDW). Our responsibilities under those requirements and principles are further described in the section "Auditor's Responsibilities for the Audit of the Consolidated Financial Statements and the Group Management Report" of our auditor's report. We are independent of the Group entities in accordance with German commercial and professional law requirements and have fulfilled our other German professional responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions on the consolidated financial statements and the Group management report.

OTHER INFORMATION

Management and the Supervisory Board are responsible for the other information. The other information comprises:

- the Report of the Supervisory Board;

- the remaining parts of the "Annual Report";

- but not the consolidated financial statements, the Group management report or our related auditor's report.

Our audit opinions on the consolidated financial statements and the Group management report do not cover

the other information and, accordingly, we do not express an audit opinion or any other form of assurance conclusion thereon.
In connection with our audit of the consolidated financial statements, our responsibility is to read the other information referred to above and, in doing so, consider whether the other information

- is materially inconsistent with the consolidated financial statements, the Group management report or our knowledge obtained in the audit; or

- otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

RESPONSIBILITIES OF MANAGEMENT AND THE SUPERVISORY BOARD FOR THE CONSOLIDATED FINANCIAL STATEMENTS AND THE GROUP MANAGEMENT REPORT

Management is responsible for the preparation of the consolidated financial statements that comply, in all material respects, with IFRS Accounting Standards as adopted by the EU and the additional requirements of German law pursuant to Section 315e (1) of the German Commercial Code (HGB), and for ensuring that the consolidated financial statements, in compliance with these requirements, give a true and fair view of the Group's net assets, financial position and results of operations. Furthermore, management is responsible for such internal controls as it has determined necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Group's ability to continue as a going concern. They are also responsible for disclosing, as applicable, matters related to going concern. Furthermore, management is responsible for preparing the consolidated financial statements on the going concern basis of accounting unless it intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so.

Furthermore, management is responsible for the preparation of the Group management report, which as a whole provides an appropriate view of the Group's position and is, in all material respects, consistent with the consolidated financial statements, complies with German legal requirements and appropriately presents the opportunities and risks of future development. In addition, management is responsible for the arrangements and measures (systems) that it has considered necessary to enable the preparation of a Group management report in accordance with the applicable German legal requirements and to provide sufficient appropriate evidence for the statements made in the Group management report.

The Supervisory Board is responsible for overseeing the Group's financial reporting process for the preparation of the consolidated financial statements and the Group management report.

AUDITOR'S RESPONSIBILITIES FOR THE AUDIT OF THE CONSOLIDATED FINANCIAL STATEMENTS AND THE GROUP MANAGEMENT REPORT

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraudulent acts or error, and whether the Group management report as a whole provides an appropriate view of the Group's position and is, in all material respects, consistent with the consolidated financial statements and the knowledge obtained in the audit, complies with German legal requirements and appropriately presents the opportunities and risks of future development, and to issue an auditor's report that includes our audit opinions on the consolidated financial statements and the Group management report.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Section 317 of the German Commercial Code (HGB) and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the

Institute of Public Auditors in Germany (IDW) will always detect a material misstatement. Misstatements may arise from fraudulent acts or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements and the Group management report.

During the audit, we exercise professional judgement and maintain professional scepticism. In addition, we:

- identify and assess the risks of material misstatement of the consolidated financial statements and the Group management report, whether due to fraudulent acts or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our audit opinions. The risk of not detecting a material misstatement resulting from fraudulent acts is higher than the risk of not detecting a material misstatement resulting from error, as fraudulent acts may involve collusion, forgery, intentional omissions, misleading representations or the override of internal controls.

- obtain an understanding of the internal controls relevant to the audit of the consolidated financial statements and of the arrangements and measures relevant to the audit of the Group management report in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an audit opinion on the effectiveness of the Group's internal controls or of such arrangements and measures.

- Evaluate the appropriateness of the accounting policies applied by management and the reasonableness of accounting estimates and related disclosures made by management.

- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in the auditor's report to the related disclosures in the consolidated financial statements and the Group management report or, if such disclosures are inadequate, to modify our respective audit opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to be able to continue as a going concern.

- evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements present the underlying transactions and events in a manner that gives a true and fair view of the net assets, financial position and results of operations of the Group in accordance with the IFRS Accounting Standards as adopted by the EU and the additional requirements of German law pursuant to Section 315e (1) of the German Commercial Code (HGB).

- plan and perform the audit of the consolidated financial statements in order to obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group as a basis for forming our audit opinions on the consolidated financial statements and the Group management report. We are responsible for the direction, supervision and review of the audit activities performed for the purpose of auditing the consolidated financial statements. We remain solely responsible for our audit opinions.

- evaluate the consistency of the Group management report with the consolidated financial statements, its compliance with legal requirements and the view of the Group's position that it provides.

- Perform audit procedures on the forward-looking statements presented by management in the Group management report. On the basis of sufficient appropriate audit evidence, we assess in particular the significant assumptions underlying the forward-looking statements made by management and evaluate whether

the forward-looking statements have been properly derived from those assumptions. We do not express a separate audit opinion on the forward-looking statements or on the underlying assumptions. There is an inherent and unavoidable risk that future events may differ materially from the forward-looking statements.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal controls that we identify during our audit.
